

The first of these is the *Apis mellifera*, the common honey bee. It is a very common bee in most parts of the world, and is the most important source of honey. It is a social insect, living in colonies of up to 50,000 individuals. The colony is headed by a single queen, who is responsible for laying the eggs. The workers are divided into several castes, including the drones, which are male and do not sting, and the foragers, which collect nectar and pollen. The honey bee is a very important insect, not only for its role in pollination, but also for its production of honey and beeswax.

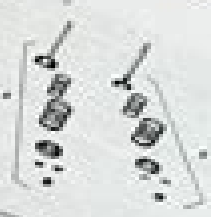

The second of these is the *Bombus terrestris*, the common bumblebee. It is a very common bee in most parts of the world, and is the most important source of honey. It is a social insect, living in colonies of up to 10,000 individuals. The colony is headed by a single queen, who is responsible for laying the eggs. The workers are divided into several castes, including the drones, which are male and do not sting, and the foragers, which collect nectar and pollen. The bumblebee is a very important insect, not only for its role in pollination, but also for its production of honey and beeswax.

The third of these is the *Apis mellifera*, the common honey bee. It is a very common bee in most parts of the world, and is the most important source of honey. It is a social insect, living in colonies of up to 50,000 individuals. The colony is headed by a single queen, who is responsible for laying the eggs. The workers are divided into several castes, including the drones, which are male and do not sting, and the foragers, which collect nectar and pollen. The honey bee is a very important insect, not only for its role in pollination, but also for its production of honey and beeswax.

REPRODUCTION OF BEEHIVES
The reproduction of beehives is a complex process, involving the laying of eggs by the queen and the development of the young bees. The queen is the only female in the colony that is capable of laying eggs. She lays the eggs in a series of cells, which are arranged in a hexagonal pattern. The eggs are fertilized by the drones, which are male and do not sting. The young bees develop from the eggs, and are divided into several castes, including the drones, which are male and do not sting, and the foragers, which collect nectar and pollen.

The fourth of these is the *Apis mellifera*, the common honey bee. It is a very common bee in most parts of the world, and is the most important source of honey. It is a social insect, living in colonies of up to 50,000 individuals. The colony is headed by a single queen, who is responsible for laying the eggs. The workers are divided into several castes, including the drones, which are male and do not sting, and the foragers, which collect nectar and pollen. The honey bee is a very important insect, not only for its role in pollination, but also for its production of honey and beeswax.
