Rethinking Value-Added Models in Education Audrey Amrein-Beardsley, 2014-04-24 Since passage of the No Child Left Behind Act in 2001 academic researchers econometricians and statisticians have been exploring various analytical methods of documenting students academic progress over time Known as value added models VAMs these methods are meant to measure the value a teacher or school adds to student learning from one year to the next To date however there is very little evidence to support the trustworthiness of these models What is becoming increasingly evident yet often ignored mainly by policymakers is that VAMs are 1 unreliable 2 invalid 3 nontransparent 4 unfair 5 fraught with measurement errors and 6 being inappropriately used to make consequential decisions regarding such things as teacher pay retention and termination Unfortunately their unintended consequences are not fully recognized at this point either Given such the timeliness of this well researched and thoughtful book cannot be overstated This book sheds important light on the debate surrounding VAMs and thereby offers states and practitioners a highly important resource from which they can move forward in more research based ways

Adaptive Thermal Comfort: Foundations and Analysis Michael

Humphreys, Fergus Nicol, Susan Roaf, 2015-08-27 There has been widespread dissatisfaction with accepted models for predicting the conditions that people will find thermally comfortable in buildings These models require knowledge about clothing and activity but can give little guidance on how to quantify them in any future situation This has forced designers to make assumptions about people's future behaviour based on very little information and as a result encouraged static design indoor temperatures This book is the second in a three volume set covering all aspects of Adaptive Thermal Comfort The first part narrates the development of the adaptive approach to thermal comfort from its early beginnings in the 1960s It discusses recent work in the field and suggests ways in which it can be developed and modelled Such models can be used to set dynamic interactive standards for thermal comfort which will help overcome the problems inherited from the past The second part of the volume engages with the practical and theoretical problems encountered in field studies and in their statistical analysis providing guidance towards their resolution so that valid conclusions may be drawn from such studies

Handbook of Nonverbal Assessment R. Steve McCallum, 2013-06-29 Psychologists educators and related health care professionals spend an enormous amount of time and energy evaluating the abilities of children and adults they serve Assessment may be tailored to determine cognitive strengths and weaknesses academic progress the effects of central nervous system trauma personality and so on For many children

and adults traditional verbally laden instruments cannot be used For example individuals who have speech and or language deficits hearing impairments emotional problems and those from other cultures cannot be evaluated with tests that rely on standard English Our culture is becoming increasingly diverse as a result schools and mental health professionals are required to serve an increasingly large community of nontraditional learners Because many of these individuals cannot be evaluated fairly by language loaded tests there is a need to use techniques and tools that are language free or can be adapted or modified to minimize the effect of language For these individuals language is a barrier to assessment rather than a vehicle The primary goal for the contributors to the Handbook of Nonverbal Assessment is to describe the most current assessment strategies and related best practices to professionals who serve individuals from diverse cultures or those who have difficulty using the English language such professionals include school psychologists special educators speech and hearing specialists rehabilitation counsellors and so on

The Bell Curves Michael Mingroni, 2020-06-19 In this book author Michael Mingroni describes a scientific hypothesis that

suggests human populations are undergoing rapid genetic change as a result of demographic changes such as urbanization and population mobility As recently as two centuries ago it was much more common for people in the now industrialized parts of the world to live in small towns and villages Owing to their relative isolation each village of the past would have constituted its own distinct gene pool The movement of people to the cities has led to a mixing of those gene pools Plant and animal breeders have long known that the crossing of genetically distinct strains of a species can cause large rapid changes in various traits The offspring of crosses known as hybrids generally grow larger and faster than either of the parental strains from which the hybrids are produced The same effect is likely occurring in our own species The technical term for this genetic effect commonly known as hybrid vigor is heterosis Several studies have already documented the expected genetic changes in the form of increased genetic heterozygosity These genetic changes offer a possible cause of trends in traits such as height growth rate IQ and others They could also explain trends in conditions such as autism asthma myopia and others Because it involves the mixing of all genes in the genome heterosis can explain the occurrence of multiple parallel trends Because it relies on the mixing of existing genetic material heterosis can explain the very rapid pace of the trends Most importantly because it is a genetic mechanism heterosis can explain why the various traits and conditions have always appeared to be strongly influenced by genetic not environmental factors That is it can explain their high heritability In the book the hypothesis is explained ways by which it can be tested are listed and some of its potential implications are explored
