Thermal Computations for Electronics Gordon N. Ellison, 2020-05-13 The first edition of Thermal Computations for Electronics Conductive Radiative and Convective Air Cooling was based on the author's lecture notes that he developed over the course of nearly 40 years of thermal design and analysis activity the last 15 years of which included teaching a university course at the senior undergraduate and graduate levels The subject material was developed from publications of respected researchers and includes topics and methods original to this author Numerous students have contributed to both the first and second editions the latter corrected sections rewritten e.g. radiation spatial effects Green's function properties for thermal spreading 1 D FEA theory and application and some new material added The flavor and organization of the first edition have been retained whereby the reader is guided through the analysis process for systems and then components Important new material has been added regarding altitude effects on forced and buoyancy driven airflow and heat transfer The first 20% of the book is devoted to the prediction of

airflow and well mixed air temperatures in systems circuit board channels and heat sinks followed by convective PCB mounted components included radiative and conductive heat transfer and the resultant temperatures in electronic equipment Detailed application examples illustrate a variety of problems Downloads from the CRC website include Mathcad™ text examples exercise solutions adopting professors only plus PDF lecture aids professors only and a tutorial Chapter 14 using free FEA software to solve a thermal spreading problem This book is a valuable professional resource for self study and is ideal for use in a course on electronics cooling It is well suited for a first course in heat transfer where applications are as important as theory
