Changing the Subject J. Myron Atkin, Paul Black, 2005-11-01 Change in education is too often a process which enthusiasts ranging from top policy makers to groups of teachers plan and drive forward but in which they all find unexpected pitfalls Every innovation depends on the commitment of schools and teachers to make it work But often that commitment is lacking or is less than total or it turns to frustration as

events develop This book is based on a set of stories from teachers and education professionals in thirteen OECD countries Twenty three case studies of educational innovation in science mathematics and technology have involved school teachers inspectors academics both subject specialists and educational researchers policy makers and advisors The case studies come from Australia Canada France Germany Ireland Japan the Netherlands Norway Scotland Spain Switzerland and the USA Drawing on this rich variety of material the authors concentrate on the origins and purposes of innovation within and across the science mathematics and technology curricula They consider the conceptions of the three subjects along with issues of teaching learning and assessment and explore the involvement of both teachers and students They reflect on the various strategies adopted to cope with or bring about change and offer valuable insights to advisors developers policy makers and practitioners both in schools and outside The writing team includes Paul Black King s College London Mike Atkin Stanford University Raymond Duval University of Lille Edwyn James Consultant OECD John Olson Queen s University of Kingston Ontario Dieter Pevsner Consultant London Senta Raizen National Centre for Improving Science Education Washington Maria Saez University of Valladolid Spain and Helen Simons Southampton University Published in association with the OECD

Super Science Experiments Querida Lee Pearce,1999 Super Science Experiments is the perfect supplement to any classroom science curriculum It is filled with hands on experiments that will spark any child s interest in and curiosity about the environment Through the observation or experiment midgraders will discover answers to such questions as How are caves formed Do plants need air What is soil made of and more **Bold Ventures Volume 1** Raizen,2012-12-06 This book based on detailed studies of eight innovations in mathematics and science education has many insights to offer on current school reform Since each innovation studied has taken its own unique approach the set as a whole spans the spectrum from curriculum development to systemic reform from concentrating on particular school populations to addressing all of K 12 education Yet these reform projects share a common context a world view on what matters in science and mathematics for students of the 1990s and beyond convictions about what constitutes effective instruction and some notions about how school change can be brought about These commonalities are drawn out in the book and illustrated with examples from the individual case studies that are reported in full in Bold Ventures Volumes 2 and 3 The eight innovations all of them projects that are well known at least by name to U S audiences are briefly described in chapter 1 Each was the subject of an in depth three year case study The research teams analyzed many documents attended numerous project meetings visited multiple sites conducted dozens of individual interviews The team leaders having spent much time with mathematics or science education over long careers looked at these reform projects through several lenses the teams sifted through the mountains of data they had collected in order to tell the story of each project in rich detail **Library of Congress Catalog: Motion Pictures and Filmstrips** Library of Congress,1968 **Resources for Teaching Middle School Science** Smithsonian Institution,National Academy of Engineering,National Science Resources Center of the National Academy of

Sciences, Institute of Medicine, 1998-04-30 With age appropriate inquiry centered curriculum materials and sound teaching practices middle school science can capture the interest and energy of adolescent students and expand their understanding of the world around them Resources for Teaching Middle School Science developed by the National Science Resources Center NSRC is a valuable tool for identifying and selecting effective science curriculum materials that will engage students in grades 6 through 8 The volume describes more than 400 curriculum titles that are aligned with the National Science Education Standards This completely new guide follows on the success of Resources for Teaching Elementary School Science the first in the NSRC series of annotated guides to hands on inquiry centered curriculum materials and other resources for science teachers The curriculum materials in the new guide are grouped in five chapters by scientific area Physical Science Life Science Environmental Science Earth and Space Science and Multidisciplinary and Applied Science They are also grouped by type core materials supplementary units and science activity books Each annotation of curriculum material includes a recommended grade level a description of the activities involved and of what students can be expected to learn a list of accompanying materials a reading level and ordering information The curriculum materials included in this book were selected by panels of teachers and scientists using evaluation criteria developed for the guide The criteria reflect and incorporate goals and principles of the National Science Education Standards The annotations designate the specific content standards on which these curriculum pieces focus In addition to the curriculum chapters the guide contains six chapters of diverse resources that are directly relevant to middle school science Among these is a chapter on educational software and multimedia programs chapters on books about science and teaching directories and guides to science trade books and periodicals for teachers and students Another section features institutional resources One chapter lists about 600 science centers museums and zoos where teachers can take middle school students for interactive science experiences Another chapter describes nearly 140 professional associations and U S government agencies that offer resources and assistance Authoritative extensive and thoroughly indexed and the only guide of its kind Resources for Teaching Middle School Science will be the most used book on the shelf for science teachers school administrators teacher trainers science curriculum specialists advocates of hands on science teaching and concerned parents **Video Rating Guide for Libraries**, 1991

Brain-powered Science Thomas O'Brien, 2010 How can a long metal needle pass through a balloon without popping it How can water flow at very different rates through two identical funnels How can a stick placed on a table under several sheets of newspaper and extended over the edge of a table snap when quickly struck without lifting or tearing the paper Author Thomas O'Brien takes these and 30 more science inquiry activities to a higher level in this book for educators who love to surprise and challenge their students with unanticipated results Using experiments based on the science of a discrepant event an experiment or demonstration in which the outcome is not what students expect O'Brien shows how learners can be motivated to reconsider their preconceived notions and think more closely about what has actually occurred

and the underlying scientific explanations What makes this volume more valuable than a mere activity book is the addition of a science education component to the extensive science content found in each activity Each discrepant event is shown to be analogous to a pedagogical principle Speaking directly to teachers O'Brien writes Your participation as teacher as learner experimenter rather than simply passive reader in these minds on activities will lead you to question and help you to revise your implicit assumptions about the nature of science teaching and learning At the same time you will develop expertise with activities that you can use with your own students The dual purpose activities thus allow you to unlock two doors with one key the doors to your own learning and to your students learning The detailed analogies between the activities and science learning make the book an ideal resource for middle and high school teachers science teacher educators and their preservice students and professional development specialists alike This thorough and thought provoking text includes more than 200 up to date internet resources as well as extensions to each of the physical science biology and chemistry activities bringing the total number of inquiry activities to nearly 120 Most important the author reminds teachers that the study of science is full of surprises and should be both meaningful and fun for students
