Dynamics of the Global Savanna and Grassland Biomes Hannah Victoria Herrero, Jane Southworth, 2021-03-19 Savanna and grassland biomes cover more of the earth's surface than any other biome type and yet they are still largely understudied. In recent decades global savanna and grassland ecosystems have become more prominent in the literature focused on global change dynamics. Savanna and grasslands represent unique biomes with their own challenges both in terms of their study and in terms of their complexity leading to many contradictory and often controversial findings. The global threats to these systems are potentially significant from climate change impacts to human management challenges from possible degradation to complete desertification which vary across disturbance regime shifts. This Special Issue of Applied Sciences *Dynamics of Global Savanna and Grassland Biomes* is intended for a wide and interdisciplinary audience and covers recent advances in drivers of vegetation dynamics, further understanding carbon interactions in these critical landscapes, advances in modeling both current and future system states, tipping points in savanna systems, human environment interactions and challenges for management biodiversity and ecosystem services. **Green's Functions** Yuri A. Melnikov, Volodymyr N. Borodin, 2017-05-08

This book is comprehensive in its classical mathematical physics presentation providing the reader with detailed instructions for obtaining Green's functions from scratch. Green's functions is an instrument easily accessible to practitioners who are engaged in design and exploitation of machines and structures in modern engineering practice. To date there are no books available on the market that are devoted to the Green's function formalism for equations covered in this volume. The reader with an undergraduate background in applied mathematics can become an active user of the Green's function approach. For the first time Green's functions are discussed for a specific class of problems dealing with potential fields induced in thin wall structures and therefore the reader will have first hand access to a novel issue. This Work is accessible to researchers in applied mathematics, mechanics and relevant disciplines such as engineering as well as to upper level undergraduates and graduate students. **Green's Functions in the Theory of Ordinary Differential Equations** Alberto Cabada, 2013-12-31

Green's Functions and Infinite Products Yuri A. Melnikov, 2011-08-30 *Green's Functions and Infinite Products* provides a thorough introduction to the classical subjects of the construction of Green's functions for the two dimensional Laplace equation and the infinite product representation of elementary functions. Every chapter begins with a review guide outlining the basic concepts covered. A set of carefully designed challenging exercises is available at the end of each chapter to provide the reader with the opportunity to explore the concepts in more detail. Hints, comments and answers to most of those exercises can be found at the end of the text. In addition several illustrative examples are offered at the end of most sections. This text is intended for an elective graduate course or seminar within the scope of either pure or applied mathematics.

Green's Functions in the Theory of Ordinary Differential Equations Alberto Cabada, 2013-11-29 This book provides a complete and exhaustive study of the Green's functions. Professor Cabada first proves the basic properties of Green's

functions and discusses the study of nonlinear boundary value problems Classic methods of lower and upper solutions are explored with a particular focus on monotone iterative techniques that flow from them In addition Cabada proves the existence of positive solutions by constructing operators defined in cones The book will be of interest to graduate students and researchers interested in the theoretical underpinnings of boundary value problem solutions

Green's Functions and Boundary Value Problems Ivar Stakgold, 1979 This revised and updated Second Edition of Green's Functions and Boundary Value Problems maintains a careful balance between sound mathematics and meaningful applications Central to the text is a down to earth approach that shows the reader how to use differential and integral equations when tackling significant problems in the physical sciences engineering and applied mathematics Ivar Stakgold incorporates developments that have altered the field of applied mathematics in recent decades particularly in areas of modeling Fourier analysis fixed point theorems inverse problems asymptotics and nonlinear methods This modernized text however retains the many features that made its predecessor one of the most successful graduate level texts of its kind including A unique blend of topics A balanced discussion of theory and applications 44 illustrations and numerous practical examples that supplement the text Chapter introductions and clear explanations of basic concepts Plentiful exercises many of which are new to this edition Green's Functions and Boundary Value Problems is an ideal text for a modern course in applied mathematics designed for students in the physical sciences engineering and mathematics It is also an excellent reference for practicing professionals in these areas

The Green Element Method Akpofure E. Taigbenu, 1999-05-31 The Green element method GEM is a novel approach of implementing in an element by element fashion the singular boundary integral theory thereby enhancing the capabilities of the theory in terms of ease in solving nonlinear problems adapting to heterogeneous problems and achieving sparseness in the global coefficient matrix By proceeding in this manner GEM provides solutions to linear nonlinear steady and transient engineering problems in one and two dimensional domains some of which hitherto could not be handled by the boundary integral theory The primary motivation for the Green element method therefore lies in the enhancement of the computational capabilities that it has given to the boundary element theory The main objectives of this text are to serve as an instructional material to senior undergraduate and first year graduate students undertaking a course in computational methods and their applications to engineering problems and as a resource material for research scientists applied mathematicians numerical analysts and engineers who may wish to take these ideas to new frontiers and applications To enhance the feel for the method exercises are presented at the end of some of the chapters and sample data can be run with the executable program GEMLN1D that can be accessed either at www.nust.ac.zw/aetaigbenu/gem/GEMLN1D or www.lafetech.com/gem/GEMLN1D

Green's Functions Yuri A. Melnikov, Max Y. Melnikov, 2012-04-02 Green's functions represent one of the classical and widely used issues in the area of differential equations This monograph is looking at applied elliptic and parabolic type partial differential equations in two variables The elliptic type includes the Laplace static Klein Gordon and biharmonic equation The parabolic type is represented by the classical heat equation and the Black Scholes equation which has emerged as a mathematical model in financial mathematics The book is attractive for practical needs It contains many easily computable or computer friendly representations of Green's functions includes all the standard Green's functions and many novel ones and provides innovative and new approaches that might lead to Green's functions The book is a useful source for everyone who is studying or working in the fields of science finance or engineering that involve practical solution of partial differential equations
