International Perspectives on Modern Developments in Early Childhood Education Huertas-Abril, Cristina A., Gómez-Parra, María Elena, 2020-06-26 Through different approaches like toys and play children explore and know the rules and symbols of their communities and recreate roles and situations that reflect their sociocultural and 21st century plurilingual world As a result they learn how to subordinate desires to social rules cooperate with others willingly and engage in socially appropriate behavior When they are evaluated together psychologically there is a current need for action to increase the amount and quality of play provided to children Since discrepancies are observed between urban and rural areas as well as among different cultures there is also a need for a research initiative where cultures can learn and take advantage of the experiences of each other

International Perspectives on Modern Developments in Early Childhood Education is an essential scholarly publication that identifies ways of intertwining key areas of early childhood education including international approaches intercultural education bilingual plurilingual education and the role of play and toys as means for meaningful intercultural and multilingual learning By incorporating a view of different cultures societies languages and educational experiences in early childhood education this volume provides data for international and intercultural exchange for the benefit of children Highlighting a range of topics such as educational systems play therapy and games this book is ideal for early childhood teachers educators academicians researchers professionals psychologists sociologists and students

The Re-emergence of Values in Science Education Deborah Corrigan, Justin Dillon, Richard Gunstone, 2007 Issues relating to values have always had a place in the school science curriculum Sometimes this has been only in terms of the inclusion of topics such as the nature of science and or scientific method and or particular intentions for laboratory work that relate to scientific method sometimes it has been much broader for example in curricula with STS emphases Of importance to aspects of this proposal is that different countries cultures have had different traditions in terms of the place of values in the school science curriculum One obvious very broad difference of this form is the central place in science education thinking in many European countries of *bildung* and the complete absence of this construct from most science curriculum thinking in English speaking contexts There are numbers of such country cultural differences In the 1990s many countries moved towards various conceptualizations of Outcomes Based Education OBE sometimes so labelled and sometimes not It was usual but not universal for OBE focused science curricula to have constrained views of the values that should be implicit and explicit in curriculum that is views concerned only with the nature of science and scientific method both usually seen as quite unproblematic Currently there are a number of education systems that are changing again and choosing to move away from Outcomes Based Education for example South Africa and several Australian states One of the most interesting features of many of these movements is the re embracing of a wider view of the science curriculum including a reconsideration of the nature and place of the values associated with science in the purposes for and approaches to science education
