

THE KIDNEY

An Outline of Normal and Abnormal Structure and Function

H. E. de WARDENER

M.B.E., M.D., F.R.C.P.

Senior Lecturer in Medicine,
St. Thomas's Hospital, London.

The purpose of this new volume is to present a concise and yet lucid outline of renal structure and function in both health and disease. It is primarily intended for students but will be found of value to clinicians whether working in hospital or in general practice. It is written with insight by one who has both research and clinical experience as a basis for his understanding approach to the subject.

After a short description of normal structure and function and the methods used to obtain information about each, there follows a section on the four main syndromes which occur in renal disease; then the relationship between renal function and electrolyte disturbance is dealt with. The second half of the book consists principally of accounts of renal disease including aetiology, diagnosis and treatment.

No comprehensive classification of renal disease has been attempted and predominantly surgical conditions have been excluded.
