

DRAW A BIRD IN SIX STEPS

Start with the big picture. Posture, proportion, and angles create the silhouette of the bird. Dark and light values convey its solidity and lighting conditions. Add a little detail at the end, and stop before you overwork it.

1 As you look at the bird, try to feel the life within it. Try to capture its posture and flow with a single line. Block in the proportions of the body, and then the head. Double-check to make sure the proportions are correct before moving on. Carve in the angles, paying particular attention to where the head and tail join the body. You are not committed to these early marks. They serve as your guides.

2 Lightly draw the form of the bird, showing the major feather groups.

3 Block in the major areas of dark and light values. Lighting, color, and pattern all cause value changes.

5 Add details. Accent areas of interest and accentuate the edges. A little goes a long way, so practice restraint.

6 Knowing when to stop drawing is important. As a general rule, stop drawing before the picture is done. It is better for a drawing to be underdeveloped than overworked.

4 If you are working with color, maintain the values you observed in step 3. Remember that in some light, a red bird will not appear red. Add the color you see, not what you think it should be.

Gower, 2014-02-25 What does it mean to be at the forefront of a characterization technique? Novel implementation and research finding new ways to visualize composites and new techniques all play a role. Yet with the myriad of advances in the field keeping up with new and advanced techniques often from many different areas has become a challenge. Biom mineralization Sourcebook: Characterization of Biom inerals and Biomimetic Materials emphasizes the interplay between multiple techniques at their current frontiers and explores how such studies may be carried out. The book addresses atomic and molecular structure, how it is described, detected, and assessed for importance. It then highlights additional measurements especially well suited to looking at two and three dimensional systems with heterogeneous if not hierarchical structure. These systems enable particular aspects of biom inerals and biomimetic models to be scrutinized. The text presents state of the art methods to assess properties of the composite and represents current approaches and aspirations to measuring entire biological working structures while retaining as much fine grained biophysical information as possible. In all these chapters authors showcase discoveries from their own programs. Along the way the book takes you on a tour from microscopy's eighteenth century roots to the recent literature and diverse research programs of the contributing investigators to the multi million dollar National Laboratory facilities that all play their roles to illuminate the ever fascinating biom inerals. A snapshot of the state of the art in a spectrum of experimental techniques applied to a common interdisciplinary goal where the ability to use the more advanced techniques often requires funding for collaboration and travel, the book will deepen the appreciation for the massive interdisciplinary effort underway, educate researchers across the field, and motivate new collaborations. **Drawing: Birds** Maury Aaseng, 2020-03-03 With Drawing Birds learn to render a variety of beautiful realistic birds in graphite pencil.
