Spacetime And Singularities Gregory L Naber:

Spacetime and Singularities Gregory L. Naber, 1988 An elementary introduction to the geometrical methods and notions used in special and general relativity Emphasizes the ideas concerned with structure of space time that play a role in Penrose Hawking singularity theorems *The New Mormon Challenge* Zondervan, 2010-12-21 Current facts about Mormonism Over 11 million members Over 60 000 full time missionaries more than any other single missionary sending organization in the world More than 310 000 converts annually As many as eighty percent of converts come from Protestant backgrounds In Mormon circles the saying is We baptize a Baptist church every week Within fifteen years the numbers of missionaries and converts will roughly double Within eighty years with adherents exceeding 267 million Mormonism could become the first world religion to arise since Islam You may know the statistics What you probably don't know are the advances the Church of Jesus Christ of Latter day Saints LDS is making in apologetics and academic respectability With superb training Mormon scholars outclass many of their opponents Arguments against Mormon claims are increasingly refuted as outdated misinformed or poorly argued The New Mormon Challenge is a response to the burgeoning challenge of scholarly Mormon apologetics Written by a team of respected Christian scholars it is free of caricature sensationalism and diatribe The respectful tone and responsible rigorous yet readable scholarship set this book in a class of its own It offers freshly researched and well documented rebuttals of Mormon truth claims Most of the chapter topics have never been addressed and the criticisms and arguments are almost entirely new But The New Mormon Challenge does not merely challenge Mormon beliefs it offers the LDS Church and her members ways to move forward The New Mormon Challenge will help you understand the intellectual appeal of Mormonism and it will reveal many of the fundamental weaknesses of the Mormon worldview Whether you are sharing the gospel with Mormons or are investigating Mormonism for yourself this book will help you accurately understand Mormonism and see the superiority of the historic Christian faith Outstanding scholarship and sound methodology make this an ideal textbook The biblical historical scientific philosophical and theological discussions are fascinating and will appeal to Christians and Mormons alike Exemplifying Christian scholarship at its best The New Mormon Challenge pioneers a new genre of literature on Mormonism The Editors Francis J Beckwith Carl Mosser and Paul Owen are respected authorities on the Church of Jesus Christ of Latter day Saints and the authors of various books and significant articles on Mormonism With contributors including such respected scholars as Craig L Blomberg William Lane Craig J P Moreland and others The New Mormon Challenge is as Richard Mouw states in his foreword an important event for both Protestant evangelicals and Mormons that models to the evangelical community what it is like to engage in respectful and meaningful exploration of a viewpoint with which we disagree on key points The Geometry of Spacetime James J. Callahan, 2013-03-09 In 1905 Albert Einstein offered a revolutionary theory special relativity to explain some of the most troubling problems in current physics concerning electromagnetism and motion Soon afterwards Hermann Minkowski recast

special relativity essentially as a new geometric structure for spacetime These ideas are the subject of the first part of the book The second part develops the main implications of Einstein's general relativity as a theory of gravity rooted in the differential geometry of surfaces The author explores the way an individual observer views the world and how a pair of observers collaborates to gain objective knowledge of the world He has tried to encompass both the general and special theory by using the geometry of spacetime as the unifying theme of the book To read it one needs only a first course in linear algebra and multivariable calculus and familiarity with the physical applications of calculus

Philosophy of Religion

William Lane Craig, 2002 Philosophy of Religion is a combined anthology and guide intended for use as a textbook in courses on Philosophy of Religion It aims to bring to the student the very best of cutting edge work on important topics in the field Presenting a sympathetic view of the topics it treats Philosophy of Religion provides an ideal resource for studying the central questions raised by religious belief

The Story of the Cosmos Daniel Ray, Paul Gould, 2019-07-16 Unraveling the Mysteries of the Universe What do you see when you gaze at the night sky Do you contemplate the stars as the random result of an evolutionary process Or do you marvel over them as a testament of the Creator's glory Modern science has popularized a view of the cosmos that suggests there is no need for God and denies any evidence of His existence But The Story of the Cosmos provides a different and fascinating perspective It points to a God who makes Himself known in the wonder and beauty of His creation This compilation from respected scholars and experts spans topics from The Mathematical Creation and the Image of God to The Glorious Dance of Binary Stars and God's Invisible Attributes Black Holes Contributors include Dr William Lane Craig Dr Guillermo Gonzalez Dr Melissa Cain Travis and Dr Michael Ward Come take a deeper look at the universe and explore the traces of God's glory in the latest discoveries of astronomy science literature and art

Reasonable Faith (3rd edition) William Lane Craig, 2008-06-09 Perfect as a textbook yet excellent for lay readers this updated edition builds a positive case for Christianity by applying the latest thought to core theological themes J Gresham Machen once said False ideas are the greatest obstacles to the reception of the gospel which makes apologetics that much more important Wanting to engage not just academics and pastors but Christian laypeople and seekers William Lane Craig has revised and updated key sections in this third edition of his classic text to reflect the latest work in astrophysics philosophy probability calculus the arguments for the existence of God and Reformed epistemology His approach that of positive apologetics gives careful attention to crucial questions and concerns including the relationship of faith and reason the existence of God the problems of historical knowledge and miracles the personal claims of Christ and the historicity of the resurrection of Jesus He shows that there is good reason to think Christianity is true As Craig says If you have a sound and persuasive case for Christianity you don't have to become an expert in comparative religions and Christian cults A positive justification of the Christian faith automatically overwhelms all competing world views lacking an equally strong case

The Nature of Nature Bruce Gordon, William Dembski, 2014-04-29 The intellectual and cultural battles now raging over

theism and atheism conservatism and secular progressivism dualism and monism realism and antirealism and transcendent reality versus material reality extend even into the scientific disciplines This stunning new volume captures this titanic clash of worldviews among those who have thought most deeply about the nature of science and of the universe itself Unmatched in its breadth and scope The Nature of Nature brings together some of the most influential scientists scholars and public intellectuals including three Nobel laureates across a wide spectrum of disciplines and schools of thought Here they grapple with a perennial question that has been made all the more pressing by recent advances in the natural sciences Is the fundamental explanatory principle of the universe life and self conscious awareness to be found in inanimate matter or immaterial mind The answers found in this book have profound implications for what it means to do science what it means to be human and what the future holds for all of us

Naturalism William Lane Craig, J.P. Moreland, 2002-01-04 Naturalism provides a rigorous analysis and critique of the major varieties of contemporary philosophical naturalism The authors advocate the thesis that contemporary naturalism should be abandoned in light of the serious objections raised against it Contributors draw on a wide range of topics including epistemology the philosophy of science the philosophy of mind and agency and natural theology

Creation Out of Nothing Paul Copan, William Lane Craig, 2004-06 Addresses the biblical philosophical and scientific bases for the doctrine of creation out of nothing while countering contemporary trends that are assailing this doctrine

The Geometry of Minkowski Spacetime Gregory L. Naber, 2012-02-02 This book offers a presentation of the special theory of relativity that is mathematically rigorous and yet spells out in considerable detail the physical significance of the mathematics It treats in addition to the usual menu of topics one is accustomed to finding in introductions to special relativity a wide variety of results of more contemporary origin These include Zeeman's characterization of the causal automorphisms of Minkowski spacetime the Penrose theorem on the apparent shape of a relativistically moving sphere a detailed introduction to the theory of spinors a Petrov type classification of electromagnetic fields in both tensor and spinor form a topology for Minkowski spacetime whose homeomorphism group is essentially the Lorentz group and a careful discussion of Dirac's famous Scissors Problem and its relation to the notion of a two valued representation of the Lorentz group This second edition includes a new chapter on the de Sitter universe which is intended to serve two purposes The first is to provide a gentle prologue to the steps one must take to move beyond special relativity and adapt to the presence of gravitational fields that cannot be considered negligible The second is to understand some of the basic features of a model of the empty universe that differs markedly from Minkowski spacetime but may be recommended by recent astronomical observations suggesting that the expansion of our own universe is accelerating rather than slowing down The treatment presumes only a knowledge of linear algebra in the first three chapters a bit of real analysis in the fourth and in two appendices some elementary point set topology The first edition of the book received the 1993 CHOICE award for Outstanding Academic Title Reviews of first edition a valuable contribution to the pedagogical literature which will be

enjoyed by all who delight in precise mathematics and physics American Mathematical Society 1993 Where many physics texts explain physical phenomena by means of mathematical models here a rigorous and detailed mathematical development is accompanied by precise physical interpretations CHOICE 1993 his talent in choosing the most significant results and ordering them within the book can't be denied The reading of the book is really a pleasure Dutch Mathematical Society 1993

Guide to Information Sources in Mathematics and Statistics Martha A. Tucker, Nancy D. Anderson, 2004-09-30 This book is a reference for librarians, mathematicians and statisticians involved in college and research level mathematics and statistics in the 21st century We are in a time of transition in scholarly communications in mathematics practices which have changed little for a hundred years are giving way to new modes of accessing information Where journals, books, indexes and catalogs were once the physical representation of a good mathematics library, shelves have given way to computers and users are often accessing information from remote places Part I is a historical survey of the past 15 years tracking this huge transition in scholarly communications in mathematics Part II of the book is the bibliography of resources recommended to support the disciplines of mathematics and statistics These are grouped by type of material Publication dates range from the 1800s onwards Hundreds of electronic resources, some online, both dynamic and static, some in fixed media, are listed among the paper resources Amazingly, a majority of listed electronic resources are free

The Kalam Cosmological Argument, Volume 2 Paul Copan, William Lane Craig, 2017-11-16 The ancient kalam cosmological argument maintains that the series of past events is finite and that therefore the universe began to exist Two recent scientific discoveries have yielded plausible *prima facie* physical evidence for the beginning of the universe The expansion of the universe points to its beginning to a Big Bang as one retraces the universe's expansion in time And the second law of thermodynamics, which implies that the universe's energy is progressively degrading, suggests that the universe began with an initial low entropy condition The kalam cosmological argument, perhaps the most discussed philosophical argument for God's existence in recent decades, maintains that whatever begins to exist must have a cause And since the universe began to exist, there must be a transcendent cause of its beginning, a conclusion which is confirmatory of theism So this medieval argument for the finitude of the past has received fresh wind in its sails from recent scientific discoveries This collection reviews and assesses the merits of the latest scientific evidences for the universe's beginning It ends with the kalam argument's conclusion that the universe has a cause, a personal cause with properties of theological significance

Quantum Mechanics Gregory L. Naber, 2021-09-20 This work covers quantum mechanics by answering questions such as where did the Planck constant and Heisenberg algebra come from, what motivated Feynman to introduce his path integral, and why does one distinguish two types of particles, the bosons and fermions The author addresses all these topics with utter mathematical rigor The high number of instructive Appendices and numerous Remark sections supply the necessary background knowledge

Topology, Geometry, and Gauge Fields Gregory L. Naber, 2013-03-14 This volume is intended to carry on the program initiated in *Topology, Geometry, and Gauge*

Fields Foundations henceforth N4 It is written in much the same spirit and with precisely the same philosophical motivation Mathematics and physics have gone their separate ways for nearly a century now and it is time for this to end Neither can any longer afford to ignore the problems and insights of the other Why are Dirac magnetic monopoles in one to one correspondence with the principal $U(1)$ bundles over S^2 Why do Higgs fields fall into topological types What led Donaldson in 1980 to seek in the Yang Mills equations of physics for the key that unlocks the mysteries of smooth 4 manifolds and what physical insights into quantum field theory led Witten fourteen years later to propose the vastly simpler but apparently equivalent Seiberg Witten equations as an alternative We do not presume to answer these questions here but only to promote an atmosphere in which both mathematicians and physicists recognize the need for answers More succinctly we shall endeavor to provide an exposition of elementary topology and geometry that keeps one eye on the physics in which our concepts either arose independently or have been found to lead to a deeper understanding of the phenomena Chapter 1 provides a synopsis of the geometrical background we assume of our readers manifolds Lie groups bundles connections etc
