Martian Outpost Erik Seedhouse, 2010-04-11 Mars Outpost provides a detailed insight into the various technologies mission architectures medical requirements and training needed to send humans to Mars It focuses on mission objectives and benefits and the risks and complexities that are compounded when linked to an overall planet exploration program involving several expeditions and setting up a permanent presence on the surface The first section provides the background to sending a human mission to Mars Analogies are made with early polar exploration and the expeditions of Shackleton Amundsen and Mawson The interplanetary plans of the European Space Agency NASA and Russia are examined including the possibility of one or more nations joining forces to send humans to Mars Current mission architectures such as NASA's Constellation ESA's Aurora and Ross Tierney's DIRECT are described and evaluated The next section looks at how humans will get to the Red Planet beginning with the preparation of the crew The author examines the various analogues to understand the problems Mars bound astronauts will face Additional chapters describe the transportation hardware necessary to launch 4-6 astronauts on an interplanetary trajectory to Mars including the cutting edge engineering and design of life support systems required to protect crews for more than a year from the lethal radiation encountered in deep space NASA's current plan is to use standard chemical propulsion technology but eventually Mars crews will take advantage of advanced propulsion concepts such as the Variable Specific Impulse Magnetoplasma Rocket ion drives and nuclear propulsion The interplanetary options for reaching Mars as well as the major propulsive maneuvers required and the trajectories and energy requirements for manned and unmanned payloads are reviewed Another chapter addresses the daunting medical problems and available countermeasures for humans embarking on a mission to Mars the insidious effects of radiation on the human body and the deleterious consequences of bone and muscle deconditioning Crew selection will be considered bearing in mind the strong possibility that they may not be able to return to Earth Still another chapter describes the guidance navigation and control system architecture as well as the lander design requirements and crew tasks and responsibilities required to touch down on the Red Planet Section 3 looks at the surface mission architectures Seedhouse describes such problems as radiation extreme temperatures and construction challenges that will be encountered by colonists He examines proposed concepts for transporting cargo and astronauts long distances across the Martian surface using magnetic levitation systems permanent rail systems and flying vehicles In the penultimate chapter of the book the author explains an adaptable and mobile exploration architecture that will enable long term human exploration of Mars perhaps making it the next space based tourist location

Space Enterprise Phillip Harris, 2009-12-29 In Space Enterprise Living and Working Offworld Dr Philip Harris provides the vision and rationale as to why humanity is leaving its cradle Earth to use space resources as well as pursuing lunar industrialization and establishing offworld settlements As a management space psychologist Dr Harris presents a behavioral science perspective on space exploration and enterprise In this his 45th book Phil has completely revised and

updated the two previous editions of this classic placing new emphasis on the need for more synergy and participation by the private sector He not only provides a critical review of what is happening in the global space community but offers specific strategies for lunar economic development The author analyzes the human factors in contemporary and future space developments especially relative to the deployment of people aloft This user friendly volume offers numerous photographs diagrams exhibits and case studies Fostering Visions for the Future National Research Council, Division on Engineering and Physical Sciences, Aeronautics and Space Engineering Board, Committee to Review the NASA Institute for Advanced Concepts, 2009-11-21 The NASA Institute for Advanced Concepts NIAC was formed in 1998 to provide an independent source of advanced aeronautical and space concepts that could dramatically impact how NASA develops and conducts its missions Until the program's termination in August 2007 NIAC provided an independent open forum a high level point of entry to NASA for an external community of innovators and an external capability for analysis and definition of advanced aeronautics and space concepts to complement the advanced concept activities conducted within NASA Throughout its 9 year existence NIAC inspired an atmosphere for innovation that stretched the imagination and encouraged creativity As requested by Congress this volume reviews the effectiveness of NIAC and makes recommendations concerning the importance of such a program to NASA and to the nation as a whole including the proper role of NASA and the federal government in fostering scientific innovation and creativity and in developing advanced concepts for future systems Key findings and recommendations include that in order to achieve its mission NASA must have and is currently lacking a mechanism to investigate visionary far reaching advanced concepts Therefore a NIAC like entity should be reestablished to fill this gap

Taylor, 2014-08-27 Operational Research OR deals with the use of advanced analytical methods to support better decision making It is multidisciplinary with strong links to management science decision science computer science and many application areas such as engineering manufacturing commerce and healthcare In the study of emergent behaviour in complex adaptive systems Agent based Modelling Simulation ABMS is being used in many different domains such as healthcare energy evacuation commerce manufacturing and defense This collection of articles presents a convenient introduction to ABMS with papers ranging from contemporary views to representative case studies The OR Essentials series presents a unique cross section of high quality research work fundamental to understanding contemporary issues and research across a range of Operational Research OR topics It brings together some of the best research papers from the esteemed Operational Research Society and its associated journals also published by Palgrave Macmillan 40th AIAA/ASME/SAE/ASEE Joint Propulsion Conference & Exhibit July 11-14, 2004, Fort Lauderdale, FL.: 04-3950 - 04-3999, 2004 *The Survival Imperative* William E. Burrows, 2007-04-01 Using Space to Save Earth Veteran science journalist William E Burrows offers a bold new mission for the U S space program to protect the Earth from the ever growing number of perils that threaten our way of life and even our very survival We are living through one of the most

dangerous times in human history Nuclear chemical and biological weapons technology are proliferating and missile technology is falling into more and more hands Extreme natural disasters like hurricanes floods fires and earthquakes are becoming increasingly costly not only in dollars but in lives as population expands Environmental crises threaten to provoke massive famines and widespread social collapse Asteroids the size of battleships streak within striking distance of the earth every year One strategy offers the best hope of protecting us from all of these dangers a revitalized national space program that coordinates efforts in global defense in environmental protection in communications and in military security The Survival Imperative offers an impassioned argument for this bold initiative To demonstrate the urgency of his cause Burrows presents a vivid scenario an impact by a moderately large asteroid that triggers a series of nuclear exchanges environmental devastation and the slow disintegration of civilization And he examines the existing space program from the heady days of the Moon landing through the political compromises that have characterized the history of NASA in the 35 years following our retreat from the Moon Most of all Burrows warns that the primary obstacle to achieving a true planetary defense program is not financial or scientific but social an unwillingness to acknowledge the urgency of the crisis and to take the political risks needed to address it The question says Burrows is not whether we can do it but whether we will act before it is too late At the Publisher's request this title is being sold without Digital Rights Management Software DRM applied
