

Chapter 12: The Lymphatic System and Body Defenses

- Consists of two semi-independent parts:

1. Lymphatic vessels
2. Lymphoid tissues and organs

- Lymphatic system functions:

- o Transports escaped fluids from the cardiovascular system back to the blood.
- o Plays essential roles in body defense and resistance to disease.

Recall that the hydrostatic and osmotic pressures operating at capillary beds force fluid out of the blood at the arterial ends of the beds ("upstream") and cause most of the expelled fluid to be reabsorbed at the venous ends ("downstream") (Chapter 11).

© 2012 Pearson Education, Inc.

Lymph Capillaries

- Weave between tissue cells and blood capillaries.
- Walls overlap to form flaplike minivalves.
- Fluid leaks into lymph capillaries.
- Capillaries are anchored to connective tissue by filaments.
- Higher pressure on the inside closes minivalves.
- Fluid is forced along the vessel.

This is very similar to the way that valves in veins work to ensure blood returns to the heart, despite being under low pressure (Chapter 11).

(B)

90% will comeback, 10% will be absorbed by the lymphatic vessels. If the lymphatic vessels' structure has lessen or decreased in integrity, if not effective, the 10% accumulates and become edema.

Lymphatic Collecting Vessels

- Collect lymph from lymph capillaries.
- Carry lymph to and away from lymph nodes.
- Return fluid to circulatory veins near the heart.
 - o Right lymphatic duct drains the lymph from the right arm and the right side of the head and thorax.
 - o Thoracic duct drains lymph from rest of body
