What do mathematicians do? Mathematics. Do they do anything else?

Some of them become citizens of the world: they get involved in social issues and take political positions. Laurent Schwartz and Steve Smale, for instance, are in that category. Schwartz lost his position at the École Polytechnique for protesting publicly against the use of torture by the French army in Algeria. Smale was subpoenaed by the House Un-American Activities Committee for co-chairing the Vietnam Day Committee in Berkeley and attempting to stop troop trains. There were earlier examples, like Bertrand Russell or Paul Painlevé, who was drawn into politics by the Dreyfus affair and went on to become Minister of War in 1917 (at the time, governments had not yet hit on the Orwellian trick of calling war defense) and *Président du Conseil* (the equivalent of Prime Minister) in postwar France.

Still others, like René Thom, used mathematics as a starting point of other intellectual endeavors. Most mathematicians, however, only do mathematics: once they have entered that enchanted realm, they never leave it. I remember Antoni Zygmund

telling me in Chicago, towards the end of his life, that the only thing he regretted was the time he had not spent doing Fourier analysis. Long gone is the time of Fermat, who did mathematics in his spare time, being otherwise occupied by his professional activities as a member of the Toulouse Parliament, presumably scribbling in book margins while listening to legal arguments. Nowadays all mathematicians are professionals, mostly working in universities, and they have little time for anything else. They are absorbed by their careers, which are entirely dependent on peer recognition, distilled by a hierarchy of professional bodies, ranging from recruiting and promotion committees to editorial boards, national academies, and the International Mathematical Union. Of course, in order to compare people, it is easier to have them all work on the same problems. This is why the mathematical community has devised an official set of important problems, and even attached a reward of one million dollars to each of them, so that even the blind can see the path to glory and follow the crowd.

If you ever have to write a biography, pick the first kind of mathematician: it will be very difficult to find anything exciting to say about someone whose entire adult life has been spent within the walls of universities, fighting for promotion, or trying to become a member of the national academy of science. This was the problem facing Andreas and Alice Heyne. Euler studied in Basel under Johann Bernoulli (the elder) and left his hometown and his mentor at twenty to take up a lectureship in Saint Petersburg (1727), where he eventually rose to the rank of professor. He moved to Berlin in 1741 and then back to Saint Petersburg again (1766), where he died in 1783, each time lured away by the prospect of higher
