Spee,2023-02-21 There is significant academic interest in the field of art and neurological disorders Considering how artistic expression may be modified by alterations in neural circuits as well as in our bodies and everyday lives associated with a range of disorders and diseases is a rich territory from which to understand the workings of our brains the unique blend of factors leading to human art making and disease itself This book will be an expos of how different neurological disorders may influence and or relate to the artistic process with a particular focus on visual art and painting The book will interrogate the question of different aspects of neurological disorders and associated brain changes that may impact artistic expression and vice versa and will include

devoted chapters on Parkinson's disease, Epilepsy, Mood Disorders, Autism, and Schizophrenia. Moreover, we will elaborate on the question from the perspective of the artist themselves with chapters that highlight the artistic process in the context of lived experience, either directly or indirectly with disease-mediated brain changes. Finally, engagement in creative acts has been linked to therapeutic benefits in multiple disease processes and neuroplasticity, which is another line of inquiry directly addressed in the book. As a whole, the volume focuses on themes and concepts at the boundary of creativity and neuroscience in such a way as to be relevant to both the medical and broader artistic community.

Secrets of Creativity Suzanne Nalbantian, Paul M. Matthews, 2019-08-26

Secrets of Creativity: What Neuroscience, the Arts, and Our Minds Reveal draws on insights from leading neuroscientists and scholars in the humanities and the arts to probe creativity in its many contexts: in the everyday mind, the exceptional mind, the scientific mind, the artistic mind, and the pathological mind. Components of creativity are specified with respect to types of memory, forms of intelligence, modes of experience, and kinds of emotion. Authors in this volume take on the challenge of showing how creativity can be characterized behaviorally, cognitively, and neurophysiologically. The complementary perspectives of the authors add to the richness of these findings. Neuroscientists describe the functioning of the brain and its circuitry in creative acts of scientific discovery or aesthetic production. Humanists from the fields of literature, art, and music give analyses of creativity in major literary works, musical compositions, and works of visual art.
