Modeling and Simulation of Carbon Emission Related Issues Wen-Hsien Tsai, 2019-08-19 Carbon emissions reached an all time high in 2018 when global carbon dioxide emissions from burning fossil fuels increased by about 2.7% after a 1.6% increase in 2017. Thus we need to pay special attention to carbon emissions and work out possible solutions if we still want to meet the targets of the Paris climate agreement. This Special Issue collects 16 carbon emissions related papers including 5 that are carbon tax related and 4 energy related papers using various methods or models such as the input output model, decoupling analysis, life cycle impact analysis, LCIA, relational analysis model, generalized Divisia index model, GDIM forecasting model, three indicator allocation model, mathematical programming, real options model, multiple linear regression, etc. The research studies come from China, Taiwan, Brazil, Thailand, and United States. These researches involved various industries such as agricultural industry, transportation industry, power industry, tire industry, textile industry, wave energy industry, natural gas industry, and petroleum industry. Although this Special Issue does not fully solve our concerns, it still provides abundant material for implementing energy conservation and carbon emissions reduction. However, there are still many issues regarding the problems caused by global warming that require research.

Foundations of Adult Nursing Dianne Burns, 2023-11-29 Covering the issues, themes, and principles that explain what it means to be a nurse today, this book provides the theory you need to know and applies it to the diverse patient groups and settings that you will encounter on your placements. Key features of the book are: Introduces the core aspects of adult nursing; An evidence-based approach with discussion of literature, policy, and research and suggested further reading for every chapter; Over 30 case scenarios to help you understand the realities of practice across a range of settings including primary care and the community; Activity boxes which challenge assumptions and encourage reflection. The book has been closely developed in line with the latest NMC Standards and Essential Skills Clusters and supports you across your entire degree programme as you develop into nurses of the future, ready to deliver and lead care.

Design and Management of Manufacturing Systems Arkadiusz Gola, 2021-09-02 Although the design and management of manufacturing systems have been explored in the literature for many years, now they still remain topical problems in the current scientific research. The changing market trends, globalization, the constant pressure to reduce production costs, and technical and technological progress make it necessary to search for new manufacturing methods and ways of organizing them and to modify manufacturing system design paradigms. This book presents current research in different areas connected with the design

and management of manufacturing systems and covers such subject areas as methods supporting the design of manufacturing systems methods of improving maintenance processes in companies the design and improvement of manufacturing processes the control of production processes in modern manufacturing systems production methods and techniques used in modern manufacturing systems and environmental aspects of production and their impact on the design and management of manufacturing systems The wide range of research findings reported in this book confirms that the design of manufacturing systems is a complex problem and that the achievement of goals set for modern manufacturing systems requires interdisciplinary knowledge and the simultaneous design of the product process and system as well as the knowledge of modern manufacturing and organizational methods and techniques
