Unit 3 – Making a Living

- 1 a) A. cleaner E teacher
B. florist F barber
C. cameraman G vet
D. decorator

b) (Suggested Answer Key)

- The cameraman would probably be paid well if the film he was working on was predicted to be a box office success.
- I would find the teacher's job more challenging than the others because you need a lot of patience to teach. I can also imagine the satisfaction you might get when you realise that your pupils finally understand the difficult aspects of the lesson.
- The vet's job would be extremely interesting for me as I've always loved animals and am especially interested in all aspects of wildlife.
- The decorator's job would be too repetitive for me. Imagine doing the same thing day in, day out! It must be very tiring too, looking up and down at ceilings and walls for hours on end!
- The most boring job would probably be the barber's job. The only thing that might reduce the boredom would be chatting with customers.

- c) A: I would certainly consider being a florist, as I love the idea of working with beautiful colours and shapes to create unusual designs.
B: I'm not so sure. I'm not really an arty sort of person, you see.

A: I would certainly not consider being a cleaner, simply because I have enough to do cleaning my own house never mind cleaning other houses!

B: I agree. It's very hard work.

- 2
- follow your dreams
 - change your plans
 - step into sb's shoes

(Suggested Answer Key)

- I've always believed that it is important to follow your dreams and not be influenced by others who might want to lead you along a different path.
- At first I wanted to become a journalist, but then I changed my plans and finally became an English teacher.
- When my mother retired, I stepped into her shoes and took over the business.

3 (Suggested Answer Key)

- | | |
|----------------|--------------|
| • 1 salary | 3 cash |
| • 2 wages | 4 pay |
| • 5 trade | 7 work |
| • 6 occupation | 8 profession |
| • 9 team | 11 staff |
| • 10 crew | 12 personnel |
| • 13 employer | 15 employee |

4 (Suggested Answer Key)

- 1 ... gave up her career to be with her children.
- 2 She volunteers every weekend to help the homeless people of the area ...
- 3 ... never seems to lose his temper.
- 4 ... was finally fired.
- 5 ... person who eventually set up his own business.
- 6 ... kept us all going through that difficult time.
- 7 He became successful simply ...
- 8 ... be a lifeguard

5 a) (Suggested Answer Key)

A: Well, personally, I think that Claire Martin would be most suitable for the post advertised, wouldn't you agree?

B: Mmmm, yes. I mean the job certainly needs someone who will be patient with more demanding residents and who can also manage the numerous enquiries that people will have. What do you think about the other applicant?

Daganzo,2012-12-06 This work was stimulated by a comment made by a former student Prof Alan Erera of Georgia Tech in connection with an inventory stability game he was going to play in one of his logistics classes This was the well known beer game that is often played in business schools to illustrate the bullwhip effect in supply chains Al had said to me that he did not have to tell his students how to reorder replacement parts from the other members of the supply chain because he knew from experience that the order sizes the players would generate as the game progressed would become chaotic anyhow Since I had not played the beer game his assertion was intriguing to me Why would such an unstructured game always lead to the same undesirable effect Did it have something to do with psychology What is it that players did to generate instabilities I posed these to other people but could not get completely satisfactory answers Thus the bullwhip mystery remained at least in my mind Since inventory chains are conservative systems analogous to a traffic stream and since traffic flow models exhibit similar effects the instability of automobile platoons and of certain numerical methods being two notable examples I suspected that traffic flow theory might shed some light on the puzzle *Techniques of*

Giampapa,2018-01-30 Until the advent of space physics astrophysical plasmas could be studied only using ground based observations Although observational methods have advanced over recent decades the merging of heliospheric physics with astrophysics is far from complete due to the vastly different techniques employed by astronomers and space physicists That astrophysical plasmas can be studied directly is a major advance in astrophysical research The solar wind from the Sun is only one of many examples of solar

winds but it provides scientists with a basis for understanding how these formerly disparate disciplines are related Cosmic Winds and the Heliosphere is a comprehensive sourcebook on conceptually correlated topics in astrophysical winds and heliospheric physics The contributors review the various kinds of winds such as solar wind winds of cataclysmic variables and winds from pulsating stars They then examine the physics of wind origin and physical phenomena in winds including heliospheric shocks magnetohydrodynamic turbulence and kinetic phenomena A final section considers interactions with surrounding media with contributions ranging from studies of the interstellar cloud surrounding the solar system to considerations of solar wind interaction with comets Prepared to the scrupulous standards of the University of Arizona Space Science Series Cosmic Winds and the Heliosphere is an essential volume for astronomers and space physicists Molecular Gas Dynamics Yoshio Sone,2007-10-16 Molecular Gas Dynamics originates from lectures and seminars delivered by the author at various universities and institutions worldwide These materials are supplemented and arranged in a form appropriate to a graduate textbook on molecular gas dynamics or gas dynamics on the basis of kinetic theory The book provides an up to date description of the basic theory of molecular gas dynamics and its various applications giving interesting and important gas namic phenomena The progress of molecular gas dynamics in the last forty years has greatly enhanced the contents of the basic theory and provided inf mation on various interesting and important gas dynamic problems This has made it possible to compile a new graduate textbook on molecular gas dyn ics The present book re ects these developments providing working knowledge theory techniques andtypicalphenomenainarare edgas low densityand cro ows for future theoretical development and applications The book begins with a brief presentation of the fundamental properties of the Boltzmann equation and a summary of notation used globally in subsequent chapters of the book A full explanation of the fundamental properties is given in Appendix A The author hopes that readers of various backgrounds can proceed quickly to the main subject with reference to Appendix A if necessary **GARP Publications Series** ,1976

Tsunami: Engineering Perspective For Mitigation, Protection And Modeling Vallam Sundar,Sannasi Annamalaisamy Sannasiraj,K Murali,V Sriram,2020-05-15 The most pertinent tsunami related issues such as water borne debris during tsunami flooding design loads to incorporate for impact forces on coastal zone infrastructure detection and warning are meticulously incorporated in this book Modelling of various coastal processes have proven to be successful in the recent past

which includes extreme events such as storm surge cyclone etc The possible provisions for computational numerical tsunami modelling and real physical modelling in laboratory are elaborated The propagation evolution and run up of tsunami waves and their associated non linear dynamics are discussed The significant inferences from the experts who have had hands on experience working with the extensive magnitude of a tsunami disaster reported on the signature studies and post facto effects of the 2004 Indian Ocean Tsunami with respect to the damages along the Indian coast

Compressor Surge and Stall R. C. Pampreen,1993 High efficiency axial and centrifugal compressors are important in fields as diverse as aircraft engines superchargers and turbochargers process and refrigeration compressors Compressors must achieve high efficiency in blade rows in diffusing flow fields Of equal and sometimes greater importance is the range of stable operation of the compressor Blade row stall characteristics determine the limit of stable operation Blading can stall uniformly with symmetric flow breakdown or asymmetrically in rotating stall which propagates around the periphery of the blade row Depending on aerodynamic conditions surge may occur instead of in concert with or subsequent to blade row stall The transient breakdown and recovery of aerodynamic loading not only limits compressor performance but also leads to mechanical failures caused by the vibrational loads imposed on the blades There is no need to know what initiates these performance limits so that surge and stall margins can be optimized and control strategies can be planned the first step toward understanding is to be knowledgeable about the physical processes occurring during surge and stall This will permit the designer to anticipate variable geometry needs such as variable inlet guide vanes variable stators and bleed port strategies Theoretical treatment is far from being well established however there are many approaches discussed in the literature This book is a unique reference to the subject matter Physical descriptions of the phenomena are given test results are presented and analytical studies are discussed There has been much written about the experimental investigations and theoretical treatments related to surge and stall To assist those who would pursue advancements in furthering our knowledge of surge and stall it seemed appropriate to have a resource that contains a compendium of information on this subject That is the purpose of this book Source d apr s la 4e de couverture
