The Packaging User's Handbook Frank A. Paine, 2012-12-06 The first version of this book Packaging Materials and

Containers was published in 1967 and was revised extensively ten years later under the title *The Packaging Media*. Some thirty or so authors were involved in producing the initial texts for these books and I must acknowledge their material much of which is still valid. It is now thirteen years since *The Packaging Media* high time to take stock and incorporate the considerable advances in materials forms techniques and machinery that have taken place. In 1977 wherever possible we asked the original authors to carry out the revisions but retirements and job changes have now eliminated over twenty of the original authors. We have therefore appointed an Editorial Board to advise on this more extensive revision and I wish to thank them for their detailed and helpful assistance. Dr C J Mackson and Professor Y Dagel for general comments and guidance on the overall plan and in particular the Introduction chapter 1 Graham Gordon and Harri Mostyn for assistance with much of Part D on Distribution Packages and Dennis Hine and Susan Selke for their work in respect of paperboard and plastics retail packaging respectively. A major contribution was made by the seventh member of the Editorial Board David Osborne who advised in the area of glass.

A Handbook of Food Packaging Frank A. Paine, Heather Y. Paine, 2012-12-06 This is the second edition of a successful title first published in 1983 and now therefore a decade out of date. The authors consider the development of the right package for a particular food in a particular market from the point of view of the food technologist the packaging engineer and those concerned with marketing. While the original format has been retained the contents have been thoroughly revised to take account of the considerable advances made in recent years in the techniques of food processing packaging and distribution. While efficient packaging is even more a necessity for every kind of food whether fresh or processed and is an essential link between the food producer and the consumer the emphasis on its several functions has changed. Its basic function is to identify the product and ensure that it travels safely through the distribution system to the consumer. Packaging designed and constructed solely for this purpose adds little or nothing to the value of the product merely preserving form or processor freshness or preventing physical damage and cost effectiveness is the sole criterion for success. If however the packaging facilitates the use of the product is reusable or has an after use some extra value can be added to justify the extra cost and promote sales. Many examples of packaging providing such extra value can be cited over the last decade.
