Bioengineering in Cell and Tissue Research Gerhard M. Artmann, Shu Chien, 2008-04-09 Cutting edge research in cell and tissue research abounds in this review of the latest technological developments in the area The chapters are written by excellent scientists on advanced frontier technology and address scientific questions that require considerable engineering brainpower The aim is to provide students and scientists working in academia and industry new information on bioengineering in cell and tissue research to enhance their understanding and innovation

Bioinformatics Analysis of Omics Data for Biomarker Identification in Clinical Research, Volume II Lixin Cheng, Hongwei Wang, Shibiao Wan, 2023-09-05 This Research Topic is part of a series with Bioinformatics Analysis of Omics Data for Biomarker Identification in Clinical Research Volume I <https://www.frontiersin.org/research-topics/13816/bioinformatics-analysis-of-omics-data-for-biomarker-identification-in-clinical-research> The advances and the decreasing cost of omics data enable profiling of disease molecular features at different levels including bulk tissues animal models and single cells Large volumes of omics data enhance the ability to search for information for preclinical study and provide the opportunity to leverage them to understand disease mechanisms identify molecular targets for therapy and detect biomarkers of treatment response Identification of stable predictive and interpretable biomarkers is a significant step towards personalized medicine and therapy Omics data from genomics transcriptomics proteomics epigenomics metagenomics and metabolomics help to determine biomarkers for prognostic and diagnostic applications Preprocessing of omics data is of vital importance as it aims to eliminate systematic experimental bias and technical variation while preserving biological variation Dozens of normalization methods for correcting experimental variation and bias in omics data have been developed during the last two decades while only a few consider the skewness between different sample states such as the extensive over repression of genes in cancers The choice of normalization methods determines the fate of identified biomarkers or molecular signatures From these considerations the development of appropriate normalization methods or preprocessing strategies may promote biomarker identification and facilitate clinical decision making

Melanie L. Hart,Bernd Rolauffs ,Ryuji Kato,2024-05-10 The last decade has seen rapid development in the use of computational techniques at bulk tissue and single cell level However our knowledge remains limited in this regard and further progress is needed especially in inflammatory and degenerative diseases Controlling modeling or predicting cellular phenotype in this context using artificial intelligence AI will greatly improve the available in vitro in situ in vivo and in silico methods but also aid in the understanding of disease pathology and therapeutic efficiency These methods not only have ramifications for our pathophysiological understanding of tissue function but are also important for advancing AI methods in cell culture tissue explants or in vivo for immunologically relevant characteristics of single cells cell populations and tissues to predict cell or tissue function Magnetic Resonance Imaging in Tissue Engineering
