life These diseases are often characterised by the imbalance between the cellular prooxidant products of metabolic processes and the antioxidant molecules within the cells The imbalance often led to the underlying factors that exacerbate the pathogenesis of some life threatening diseases such as carcinogenesis obesity diabetes and cardiovascular diseases Natural products including phytochemicals and functional foods are known for their ability to affect metabolic processes such as ameliorating reactive oxygen species induced mitochondria dysfunction mitigating inflammatory response and other cellular functions that could ameliorate the disease developments Despite the relatively low toxicities of natural products as compared with synthetic products further studies are still required to optimize the bioavailability therapeutics pharmaceuticals and clinical trials of natural products in patients suffering oxidative and metabolic diseases

Opportunistic pathogens: pathogenesis and multi-drug resistance mechanisms Shicheng Chen, Lisheng Liao, Mingxi Wang, 2025-04-17 The World Health Organization WHO has identified antimicrobial resistance AMR as one of the most critical global public health threats At least 4.95 million people death was caused by AMR in 2019 Even worse its potential economic impact is estimated to reach a staggering 100 trillion due to AMR in the next thirty years <https://www.who.int/health-topics/antimicrobial-resistance> Researching the development of antibiotic resistance and exploring ways to prevent detect and treat antimicrobial resistant infections have been prioritized in the medical microbiology field AMR mechanisms have been uncovered on many Enterobacteriaceae and Gram positive bacteria such as Enterococcus faecium and Staphylococcus aureus due to their clinical significance and diverse resistance mechanisms Unfortunately the opportunistic pathogens have been overlooked in the clinics because they are often identified as normal flora or common environmental organisms in human specimens Opportunistic pathogens may have low pathogenicity while they can often cause serious infections in immunocompromised patients and lead to outbreak in the healthcare settings They may even lead to diseases in healthy individuals if being introduced into hosts system by traumatization Management of such infections is often challenging due to the lack of guidelines standards for antibiotic susceptibility tests as well as multi drug resistance MDR Lately diseases linked to non pathogenic microorganisms are becoming more common under typical conditions such as Stenotrophomonas maltophilia Elizabethkingia spp Acinetobacter baumannii and many others

Invisible Illness Emily Mendenhall, 2026-01-06 A moving cultural history of disability and a powerful call to action to change how our medical system and society supports those with complex chronic conditions From lupus to Lyme invisible illness is often dismissed by everyone but the sufferers Why does the medical establishment continually insist that when symptoms are hard to explain they are probably just in your head Inspired by her work with long COVID patients medical anthropologist Emily Mendenhall traces the story of complex chronic conditions to show why both research and practice fail so many Mendenhall points out disconnects between the reality of chronic disease which typically involves multiple intersecting problems resulting in unique individualized illness and the assumptions of medical providers who behave as though chronic diseases have uniform effects for everyone And while

invisible illnesses have historically been associated with white middle class women being believed that you are sick is even more difficult for patients whose social identities and lived experiences may not align with dominant medical thought Weaving together cultural history with intimate interviews Invisible Illness upholds the experiences of those living with complex illness to expose the failures of the American healthcare system and how we can do better **Caldecott**
