Problem/Area of Concern	Probable Cause	Resolution
Alarm too loud/too quiet		Push and hold Alarm Silence button until you hear a beep to toggle between loud and quiet
Exhalation Valve Calibration fails (Cal Failed)	This is usually caused by a leak in the system. It can also be caused if you titrate oxygen directly into the circuit rather than using the blending bag	1. Check all circuit connections 2. Check that exhalation valve drive line and prox line are not reversed 3. Use your thumb (instead of a test lung) to occlude circuit during calibration 4. If using a reusable exhalation valve, ensure that the diaphragm is seated properly 5. Try a different exhalation valve 6. Make sure that oxygen is not titrated directly into the breathing circuit
Exhalation valve makes honking noise	Low compliance/high resistance of circuit system	1. Make sure breathing circuit is 22 mm ID (regardless of patient size) and at least 8 ft long for small patients 2. If using approved disposable exhalation valve with PEEP > 10 cmH₂O, remove flow deflector at bottom of valve
External power After plugging into external A.C or D.C. Ext Power indicator on panel does not light after one minute		Check that power cord is pushed in all the way on both ends. If D.C., make sure outlet is active (some car outlets are not active with key off)
High V _I (Inspiratory minute volume) alarm	Usual causes: 1. Disconnect for suctioning 2. Increase in trach/airway leak	1. Push Alarm Silence when reconnecting after suctioning (to allow 1 minute for stabilization) 2. Evaluate leak, look for normal wake-sleep trends and set alarms appropriately
