Nurturing Science-based Ventures Ralf W. Seifert,Benoît F. Leleux,Christopher L. Tucci,2008-01-25 Few would deny that small entrepreneurial firms play an important economic and social role Not only do they generate a significant number of jobs but they also contribute a large proportion of gross national product GNP Not all small firms qualify as entrepreneurial entities however While small refers mostly to size entrepreneurial refers to growth and a value creation orientation The vast jority of small firms have no growth aspirations nor do they have the means and skills to grow As such they may still provide employment and local value but would not embrace the high potential aspirations of entrepreneurial ventures This book clearly addresses those

entrepreneurs who are interested in leading high growth potential companies

Table 1	Table 1	Growth Typology of Small Firms
1 Type of venture	Desired sales range	Future employees
Lifestyle	0 to 1 million	0 to 4
Smaller high potential	1 million to 20 million	5 to 50
High potential over 20 million	Over 50	High innovation technology based startups

assume a very special role in high growth entrepreneurship. Although these startups constitute a comparatively low number of small businesses, they produce proportionately far more jobs than their low and medium innovation counterparts. The aim of achieving rapid growth is typically referred to as high expectation entrepreneurship. An area of major concern to us is a fact revealed in the latest GEM report: The rate of European high expectation entrepreneurial activity is among the lowest in the world. **Venture**, 1985

This book presents comprehensive results from case studies of three innovations in mathematics education that have much to offer toward understanding current reforms in this field. Each chapter tells the story of a case in rich detail, with extensive documentation and in the voices of many of the participants: the innovators, the teachers, the students. Similarly, Volume 2 of *Bold Ventures* presents the results from case studies of five innovations in science education. Volume 1 provides a cross-case analysis of all eight innovations. Many U.S. readers certainly will be very familiar with the name of at least one, if not all, of the mathematics innovations discussed in this volume, for example, the NCTM Standards, and probably with their general substance. Much of the education community's familiarity with these arises from the projects' own dissemination efforts. The research reported in this volume, however, is one of the few detailed studies of these

innovations undertaken by researchers outside the projects themselves
