Chip Multiprocessor Generator Ofer Shacham,2011 Recent changes in technology scaling have made power dissipation today s major performance limiter As a result designers struggle to meet performance requirements under stringent power budgets At the same time the traditional solution to power efficiency application specific designs has become prohibitively expensive due to increasing nonrecurring engineering NRE costs Most concerning are the development costs for design validation and software for new systems In this thesis we argue that one can harness ideas of reconfigurable designs to build a design framework that can generate semi custom chips a Chip Generator A domain specific chip generator codifies the designer knowledge and design trade offs into a template that can be used to create many different chips Like

reconfigurable designs these systems fix the top level system architecture amortizing software and validation and design costs and enabling a rich system simulation environment for application developers Meanwhile below the top level the developer can program the individual inner components of the architecture Unlike reconfigurable chips a generator compiles the program to create a customized chip This compilation process occurs at elaboration time long before silicon is fabricated The result is a framework that enables more customization of the generated chip at the architectural level because additional components and logic can be added if the customization process requires it At the same time this framework does not introduce inefficiency at the circuit level because unneeded circuit overheads are not taped out Using Chip Generators we argue will enable design houses to design a wide family of chips using a cost structure similar to that of designing a single chip potentially saving tens of millions of dollars while enabling per application customization and optimization

Software-Hardware Integration in Automotive Product Development John Blyler, 2013-11-07 Software Hardware Integration in Automotive Product Development brings together a must read set of technical papers on one the most talked about subjects among industry experts The carefully selected content of this book demonstrates how leading companies universities and organizations have developed methodologies tools and technologies to integrate verify and validate hardware and software systems The automotive industry is no different with the future of its product development lying in the timely integration of these chiefly electronic and mechanical systems The integration activities cross both product type and engineering discipline boundaries to include chip embedded board and network vehicle level systems Integration verification and validation of each of these three domains are examined in depth attesting to the difficulties of this phase of the automotive hardware and software system life cycle The current state of the art is to integrate verify validate and test automotive hardware and software with a complement of physical hardware and virtual software prototyping tools The growth of sophisticated software tools sometimes combined with hardware in the loop devices has allowed the automotive industry to meet shrinking time to market decreasing costs and increasing safety demands It is also why most of the papers in this book focus on virtual systems prototypes and models to emulate and simulate both hardware and software Further such tools and techniques are the way that hardware and software systems can be co verified and tested in a concurrent fashion The goal of this compilation of expert articles is to reveal the similarities and differences between the integration verification and validation IVV of hardware and software at the chip board and network levels This

comparative study will reveal the common IVV thread among the different but ultimately related implementations of hardware and software systems In so doing it supports the larger systems engineering approach for the vertically integrated automobile namely that of model driven development
