Numerical Methods in Geotechnical Engineering IX, Volume 2 António S. Cardoso, José L. Borges, Pedro A. Costa, António T. Gomes, José C. Marques, Castorina S. Vieira, 2018-06-27 Numerical Methods in Geotechnical

Engineering IX contains 204 technical and scientific papers presented at the 9th European Conference on Numerical Methods in Geotechnical Engineering NUMGE2018 Porto Portugal 25-27 June 2018. The papers cover a wide range of topics in the field of computational geotechnics providing an overview of recent developments, scientific achievements, innovations and engineering applications related to or employing numerical methods. They deal with subjects from emerging research to engineering practice and are grouped under the following themes: Constitutive modelling and numerical implementation; Finite element, discrete element and other numerical methods; Coupling of diverse methods; Reliability and probability analysis; Large deformation, large strain analysis; Artificial intelligence and neural networks; Ground flow, thermal and coupled analysis; Earthquake engineering; soil dynamics and soil structure interactions; Rock mechanics; Application of numerical methods in the context of the Eurocodes; Shallow and deep foundations; Slopes and cuts; Supported excavations and retaining walls; Embankments and dams; Tunnels and caverns and pipelines; Ground improvement and reinforcement; Offshore geotechnical engineering; Propagation of vibrations. Following the objectives of previous eight thematic conferences: 1986 Stuttgart Germany, 1990 Santander Spain, 1994 Manchester United Kingdom, 1998 Udine Italy, 2002 Paris France, 2006 Graz Austria, 2010 Trondheim Norway, 2014 Delft The Netherlands. Numerical Methods in Geotechnical Engineering IX updates the state of the art regarding the application of numerical methods in geotechnics both in a scientific perspective and in what concerns its application for solving practical boundary value problems. The book will be much of interest to engineers, academics and professionals involved or interested in Geotechnical Engineering. This is volume 2 of the NUMGE 2018 set.

The Known Unknowns of Translation Studies Elke Brems, Reine Meylaerts, Luc van Doorslaer, 2014-12-15. After several paradigm changes and even more turns after fights about scholarly territories and methodological renewal after intra and interdisciplinary discussions, Translation Studies continues to produce a large number of publications dealing with the challenge of defining itself and its object with the borderlines of both the discipline and the object with ways of interacting with related sub-disciplines. This publication gathers contributions from established TS scholars, all former CETRA Chair professors, about the topics that will very probably dominate the near future of the discipline. This is an extended and updated version of a Target special issue with the same title that was published in 2012. 24.1 **2030** Rutger van Santen, Djan Khoe, Bram Vermeer, 2010-09-15. Imagine living in 1958 and knowing that the integrated circuit, the microchip, was about to be invented and would revolutionize the world. Or imagine 1992 when the Internet was about to transform virtually every aspect of our lives. Incredibly, this book argues that we stand at such a moment right now and not just in one field but in many. In 2030, authors Rutger van Santen, Djan Khoe and Bram Vermeer interview over two dozen scientific and technological experts on themes of health, sustainability and communication, asking them to look forward to the year 2030 and comment on the kind of research that will play a necessary role. If we know what technology will be imperative in 2030, the authors reason, what can we do now to influence future breakthroughs? Despite working in dissimilar fields, the experts called upon in the

book including Hans Blix Head of the UN investigation in Iraq Craig Venter explorer of the human DNA and Susan Greenfield a leading world authority on the human brain among many others all emphasize the interconnectedness of our global networks in technology and communication so tightly knit that the world's major conflicts are never isolated incidents A fresh understanding of the regularities underlying these complex systems is more important than ever Using bright accessible language to discuss topics of universal interest and relevance 2030 takes the position that we can in fact influence the course of history It offers a new way of looking forward a fresh perspective on sustainability stability and crisis prevention For anyone interested in modern science this book will showcase the technologies that will soon change the way we live
