Architecture and Urbanism in the British Empire G. A. Bremner, 2016-10-13 Throughout today s postcolonial world buildings monuments parks streets avenues entire cities even remain as witness to Britain s once impressive if troubled imperial past These structures are a conspicuous and near inescapable reminder of that past and therefore the built heritage of Britain s former colonial empire is a fundamental part of how we negotiate our postcolonial identities often lying at the heart of social tension and debate over how that identity is best represented This volume provides an overview of the architectural and urban transformations that took place across the British Empire between the seventeenth and mid twentieth centuries Although much research has been carried out on architecture and urban planning in Britain s empire in recent decades no single comprehensive reference source exists The essays compiled here remedy this deficiency With its extensive chronological and regional coverage by leading scholars in the field this volume will quickly become a seminal text for those who study teach and research the relationship between empire and the built environment in the British context It provides an up to date account of past and current historiographical approaches toward the study of British imperial and colonial architecture and urbanism and will prove equally useful to those who study architecture and urbanism in other European imperial and transnational contexts The volume is divided in two main sections The first section deals with overarching thematic issues including building typologies major genres and periods of activity networks of expertise and the transmission of ideas the intersection between planning and politics as well as the architectural impact of empire on Britain itself The second section

builds on the first by discussing these themes in relation to specific geographical regions teasing out the variations and continuities observable in context both practical and theoretical

Sites Unseen William A. Gleason, 2011-08-22 Sites Unseen examines the complex intertwining of race and architecture in nineteenth and early twentieth century American culture the period not only in which American architecture came of age professionally in the U S but also in which ideas about architecture became a prominent part of broader conversations about American culture history politics and although we have not yet understood this clearly race relations This rich and copiously illustrated interdisciplinary study explores the ways that American writing between roughly 1850 and 1930 concerned itself often intensely with the racial implications of architectural space primarily but not exclusively through domestic architecture In addition to identifying an archive of provocative primary materials Sites Unseen draws significantly on important recent scholarship in multiple fields ranging from literature history and material culture to architecture cultural geography and urban planning Together the chapters interrogate a variety of expressive American vernacular forms including the dialect tale the novel of empire letters and pulp stories along with the plantation cabin the West Indian cottage the Latin American plaza and the Oriental parlor These are some of the overlooked plots and structures that can and should inform a more comprehensive consideration of the literary and cultural meanings of American architecture Making sense of the relations between architecture race and American writing of the long nineteenth century in their regional national and hemispheric contexts Sites Unseen provides a clearer view not only of this catalytic era but also more broadly of what architectural historian Dell Upton has aptly termed the social experience of the built environment

Living Downtown Paul Groth, 2023-11-15 From the palace hotels of the elite to cheap lodging houses residential hotels have been an element of American urban life for nearly two hundred years Since 1870 however they have been the target of an official war led by people whose concept of home does not include the hotel Do these residences constitute an essential housing resource or are they as charged a public nuisance Living Downtown the first comprehensive social and cultural history of life in American residential hotels adds a much needed historical perspective to this ongoing debate Creatively combining evidence from biographies buildings and urban neighborhoods workplace records and housing policies Paul Groth provides a definitive analysis of life in four price differentiated types of downtown residence He demonstrates that these hotels have played a valuable socioeconomic role as home to both long term residents and temporary laborers Also the convenience of hotels has made them the residence of choice for a surprising number of Americans from hobo author Boxcar Bertha to Calvin Coolidge Groth examines the social and cultural objections to hotel households and the increasing efforts to eliminate them which have led to the seemingly irrational destruction of millions of such housing units since 1960 He argues convincingly that these efforts have been a leading contributor to urban homelessness This highly original and timely work aims to expand the concept of the American home and to recast accepted notions about the relationships among urban life architecture and the public management of residential environments From

French Encounters with the American Counterculture 1960-1980 Caroline Maniaque-Benton,2016-12-05 French American interrelationships in the areas of design and creative thinking have been under acknowledged It is normally asserted that French architects looked to North America for technical lessons in the development of modern architecture in the 1960s but that the French cultural environment was generally hostile to American ideas This book includes interviews with French architects who visited the United States in the 1960s 1970s and then assumed influential positions in the press and education in France Some of these architects found in non mainstream America and its radical groups of architectural drop outs a liberating force free of the taint of American capitalism and the high investment technology Often living in alternative student communities they saw highly innovative low cost technical and structural systems placed in the service of collective forms of living which represented a critique not only of professional architectural practice but also of bourgeois forms of living Many of them also studied in American schools of architecture and came in contact with an intellectual and interdisciplinary style of architectural education unavailable in France at that time
