Eakin, 1978-03-14 The real Hans Spemann German embryologist 1869 1941 developed a concept of embryonic induction through his experiments on early amphibian embryos which demonstrated neural induction by the primary organizer and evocation of the lens by the optic vesicle For his discovery of the organizer he was awarded the Nobel Peace in Physiology and Medicine in 1935 while he was Professor of Zoology at Freiburg Germany In the twenties and early thirties Spemann s laboratory was a mecca for students and investigators entering the new field of experimental embryology Comparative Vertebrate Anatomy Kenneth V. Kardong, Edward J. Zalisko, 2002 This laboratory manual may accompany any comparative anatomy text It carefully guides students through dissection and is richly illustrated Topics include protochordates vertebrate integuments skeletal system digestive systems and muscular systems and external anatomy *A Laboratory manual for comparative vertebrate anatomy* Libbie Henrietta Hyman, 1922 *A Laboratory Manual for Comparative Vertebrate Anatomy (Classic Reprint)* Libbie Henrietta Hyman, 2015-08-05 Excerpt from A Laboratory Manual for Comparative Vertebrate Anatomy Several years ago the

method of procedure in the laboratory work in vertebrate zoology in this University was changed from the type plan then in common use to the comparative plan No doubt a similar change has been made in many other institutions A suitable manual for the comparative method has however hitherto been lacking the present publication attempts to supply this need There can scarcely be any question of the superiority of the comparative method of study of vertebrate anatomy for by this method the student not only learns all of the anatomical facts brought out by the type method but he also acquires an understanding of vertebrate and human structure which he is quite unable to attain by the older method of study In view of the fact that the majority of the students taking courses in vertebrate anatomy at the present time are preparing for medicine it seems obligatory that they be taught the history of the human body as revealed by the study of the anatomy of vertebrates On the other hand the comparative method is perhaps faulty in that it may not give the student a clear cut picture of the characteristics of the various classes of vertebrates Thus while the student readily learns the history of the aortic arches for example he does not readily associate any particular group of vertebrates with a particular condition of the arches when the comparative method is followed This defect should probably be remedied in the lecture part of the course I have attempted to remedy it to a slight extent by introducing the section on the general features of typical chordates In this manual I have attempted not only to give the laboratory directions for the dissection of the various systems but I have also presented in connection with each system a very brief generalized and simplified account of the development and evolution of that system It has seemed to me essential that such an account precede or accompany the laboratory directions in order to give a significance to the facts revealed by the dissection at the time when the student becomes aware of those facts As the consultation of other texts during a dissection is inconvenient and time consuming I have thought it the most practical plan to include such explanatory matter in the laboratory manual Simple illustrations have been added to clarify further the explanations I have not however in the least intended that these explanations should take the place of reading in the standard texts of comparative anatomy The students should understand that additional outside reading is expected of them In making such brief and generalized explanations as are given here it is impossible to take into account numerous exceptions and variations About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works
