West,2014-12-12 The world is going mobile at an astounding pace Estimates show 80 percent of global Internet access will take place through mobile devices by 2016 Smartphones tablets and handheld devices have reshaped communications the global economy and the very way in which we live The revolution is an electronic nirvana for the first time in human history we have sophisticated digital applications to help us learn access financial and health care records connect with others and build businesses But the one trillion dollar mobile industry is still relatively young Leaders in both the public and private sectors need to figure out how to apply mobile technologies or mobile devices to optimize education health care public safety disaster preparedness and economic development And the ever expanding mobile frontier presents new challenges to law policy and regulations and introduces new tensions one person s idea of cautious deliberation can be another s idea of a barrier to innovation In *Going Mobile* Darrell M West breaks down the mobile revolution and shows how to maximize its overall benefits in both developed and emerging markets Contents 1 The Emergence of Mobile Technology 2 Driving Global Entrepreneurship 3 Alleviating Poverty 4 Invention and the Mobile Economy 5 Mobile Learning 6 Improving Health Care 7 Medical Devices and Sensors 8 Shaping Campaigns and Public Outreach 9 Disaster Relief and Public Safety 10 Looking Ahead **Seduction by Contract** Oren Bar-Gill,2012-08-23 Consumers routinely enter into long term contracts with providers of goods and services from credit cards mortgages cell phones insurance TV and internet services to household appliances theatre and sports events health clubs magazine subscriptions transportation and more Across these consumer markets certain design features of contracts are recurrent and puzzling Why do sellers design contracts to provide

short term benefits and impose long term costs Why are low introductory prices so common Why are the contracts themselves so complex with numerous fees and interest rates tariffs and penalties Seduction by Contract explains how consumer contracts emerge from the interaction between market forces and consumer psychology Consumers are short sighted and optimistic so sellers compete to offer short term benefits while imposing long term costs Consumers are imperfectly rational so sellers hide the true costs of products and services in complex contracts Consumers are seduced by contracts that increase perceived benefits without actually providing more benefits and decrease perceived costs without actually reducing the costs that consumers ultimately bear Competition does not help this behavioural market failure It may even exacerbate it Sellers operating in a competitive market have no choice but to align contract design with the psychology of consumers A high road seller who offers what she knows to be the best contract will lose business to the low road seller who offers what the consumer mistakenly believes to be the best contract Put bluntly competition forces sellers to exploit the biases and misperceptions of their customers Seduction by Contract argues that better legal policy can help consumers and enhance market efficiency Disclosure mandates provide a promising avenue for regulatory intervention Simple aggregate disclosures can help consumers make better choices Comprehensive disclosures can facilitate the work of intermediaries enabling them to better advise consumers Effective disclosure would expose the seductive nature of consumer contracts and as a result reduce sellers incentives to write inefficient contracts Developing its explanation through a general framework and detailed case studies of three major consumer markets credit cards mortgages and cell phones Seduction by Contract is an accessible introduction to the law and economics of consumer contracts and a powerful critique of current regulatory policy
