Version Of Milliman Care Guidelines 18th Edition:

Geriatric Emergency Medicine Joseph H. Kahn, Brendan G. Magauran, Jr, Jonathan S. Olshaker, 2014-01-16 As the global geriatric population continues to grow an increasing proportion of people reporting to emergency departments are elderly The work up of these patients uses more time and resources than that of younger patients and is complicated by the fact that acute disease often presents more subtly without the outward manifestations typically seen in younger patients This volume focuses on the unique pathophysiology of the elderly presenting guidelines for resuscitation evaluation and management The first section discusses general principles including demographics pharmacology and pain management The following sections cover high risk chief presenting complaints and review geriatric emergencies Finally topics of particular relevance in the geriatric population are discussed including functional assessment end of life care financial considerations and abuse This book provides a comprehensive practical framework for community and academic emergency medicine practitioners as well as emergency department administrators striving to improve delivery of care to this vulnerable growing population

Hospital Capacity Management Robbin Dick, Robert Agness, 2021-03-19 Hospital Capacity Management Insights and Strategies details many of the key processes procedures and administrative realities that make up the healthcare system we all encounter when we visit the ED or the hospital It walks through in detail how these systems work how they came to be this way why they are set up as they are and then in many cases why and how they should be improved right now Many examples pulled from the lifelong experiences of the authors published studies and well documented case studies are provided both to illustrate and support arguments for change First and foremost it is necessary to remember that the mission of our healthcare system is to take care of patients This has been forgotten at times causing many of the issues the authors discuss in the book including hospital capacity management This facet of healthcare management is absolutely central to the success or failure of a hospital both in terms of its delivery of care and its ability to survive as an institution Poor hospital capacity management is a root cause of long wait times overcrowding higher error rates poor communication low satisfaction and a host of other commonly experienced problems It is important enough that when it is done well it can completely transform an entire hospital system Hospital capacity management can be described as optimizing a hospital's bed availability to provide enough capacity for efficient error free patient evaluation treatment and transfer to meet daily demand A hospital that excels at capacity management is easy to spot no lines of people waiting and no patients in hallways or sitting around in chairs These hospitals don't divert incoming ambulances to other hospitals they have excellent patient safety records and efficiently move patients through their organization They exist but are sadly in the minority of American hospitals The vast majority are instead forced to constantly react to their own poor performance This often results in the building of bigger and bigger institutions which instead of managing capacity simply create more space in which to mismanage it These institutions are failing to resolve the true stumbling blocks to excellent patient care many of which you

may have experienced firsthand in your own visit to your hospital It is the hope of the authors that this book will provide a better understanding of the healthcare delivery system *Legal Nurse Consulting Principles* Lars

Evaluating Critical Care William J. Sibbald, Julian F. Bion, 2012-12-06 Measuring the quality of a complex service like critical care that combines the highest technology with the most intimate caring is a challenge Recently consumers clinicians and payers have requested more formal assessments and comparisons of the quality and costs of medical care 2 Donabedian 1 proposed a framework for thinking about the quality of medical care that separates quality into three components structure process and outcome An instructive analogy for understanding this framework is to imagine a food critic evaluating the quality of a restaurant The critic might comment on the decoration and lighting of the restaurant how close the tables are to each other the extent of the wine list and where the chef trained These are all evaluations of the restaurant structure In addition the critic might comment on whether the service was courteous and timely measures of process Finally the critic might comment on outcomes like customer satisfaction or food poisoning Similarly to a health care critic structure is the physical and human resources used to deliver medical care Processes are the actual treatments offered to patients Finally outcomes are what happens to patients for example mortality quality of life and satisfaction with care Table 1 There is a debate about which of these measurements is the most important measure of quality
