

Example Problem: Venturi meter system.

The venturi meter shown in figure below carries water at 60°C. The inside dimensions are machined to the sizes shown in figure. The specific gravity of the gage fluid in the manometer is 1.25. Calculate the velocity of flow at section A and the volume flow rate of water.

$$P_1 = P_2 + \gamma_w h + (1.25)$$

$$P_2 = P_1 + \gamma_w h + \gamma = 1.25 \gamma_w (0.18)$$

$$\text{But, as } P_1 = P_2$$

Therefore from the above equations, $P_1 = P_2$ can be found. Complete the rest of the solution.

Note: A venturi meter is a device that uses a constriction in a flow system to measure the velocity of flow.

Introduction to Engineering Fluid Mechanics Marcel Escudier, 2017-10-27 We inhabit a world of fluids including air a gas water a liquid steam vapour and the numerous natural and synthetic fluids which are essential to modern day life Fluid mechanics concerns the way fluids flow in response to imposed stresses The subject plays a central role in the education of students of mechanical engineering as well as chemical engineers aeronautical and aerospace engineers and civil engineers This textbook includes numerous examples of practical applications of the theoretical ideas presented such as calculating the thrust of a jet engine the shock and expansion wave patterns for supersonic flow over a diamond shaped aerofoil the forces created by liquid flow through a pipe bend and or junction and the power output of a gas turbine The first ten chapters of the

book are suitable for first year undergraduates The latter half covers material suitable for fluid mechanics courses for upper level students Although knowledge of calculus is essential this text focuses on the underlying physics The book emphasizes the role of dimensions and dimensional analysis and includes more material on the flow of non Newtonian liquids than is usual in a general book on fluid mechanics a reminder that the majority of synthetic liquids are non Newtonian in character
