What is Mathematics? Richard Courant, Herbert Robbins, 1996 The teaching and learning of mathematics has degenerated into the realm of rote memorization the outcome of which leads to satisfactory formal ability but not real understanding or greater intellectual independence The new edition of this classic work seeks to address this problem Its goal is to put the meaning back into mathematics Lucid easily understandable Albert Einstein 301 linecuts Mathematics?. Handbook of Cognitive Mathematics Marcel Danesi,2022-10-31 Cognitive mathematics provides insights into how mathematics works inside the brain and how it is interconnected with other faculties through so called blending and other associative processes This handbook is the first large collection of various aspects of cognitive mathematics to be amassed into a single title covering decades of connection between mathematics and other figurative processes as they manifest themselves in language art and even algorithms It will be of use to anyone working in math cognition and education with each section of the handbook edited by an international leader in that field *The Prehistory of Mathematical Structuralism* Erich H. Reck, Georg Schiemer, 2020 This edited volume explores the previously underacknowledged pre history of

mathematical structuralism showing that structuralism has deep roots in the history of modern mathematics. The contributors explore this history along two distinct but interconnected dimensions First they reconsider the methodological contributions of major figures in the history of mathematics Second they re examine a range of philosophical reflections from mathematically inclinded philosophers like Russell Carnap and Quine whose work led to profound conclusions about logical epistemological and metaphysical aspects of structuralism Mathematical Imagining Christof Weber, 2023-10-10 Imagine a plastic cup lying on the floor Give the cup a nudge so that it begins to roll What does the path it takes look like So begins the journey that Christof Weber takes you on in Mathematical Imagining A Routine for Secondary Classrooms Along the way he makes the case that the ability to imagine manipulate and explain mathematical images and situations is fundamental to all mathematics and particularly important to higher level study Most importantly drawing on years of experiments in his own classroom Weber shows that mathematical imagining is a skill that can be taught efficiently and effectively Mathematical Imagining describes an original routine that gives students space and time to imagine a mathematical situation and then revise discuss and act upon the mental images they create You can use this creative routine to glimpse into your students thinking and discover teaching opportunities while empowering them to create their own mathematics Inside you ll find the following An introduction to the routine including the rationale behind it facilitation guidance and classroom examples Modifications to implement the routine in your classroom even with varying time constraints 37 exercises broken into four categories constructions problem solving reasoning and paradoxes Discussions of the mathematics involved in each exercise including possible follow up questions Instructions on how to create your own exercises beyond the book This one of a kind resource is for secondary teachers looking to inspire student creativity and curiosity deepen their own subject matter knowledge and pedagogical content knowledge and invite all students to access the power of their own mathematical Similarity Search and Applications Giuseppe Amato, Vladimir Mic, Agma Traina, Nicola Messina, Laurent imaginations Amsaleg, Gylfi Þór Guðmundsson, Björn Þór Jónsson, Lucia Vadicamo, 2025-10-07 This book constitutes the refereed proceedings of the 18th International Conference on Similarity Search and Applications SISAP 2025 held in Reykjavik Iceland during October 2025 The 18 full papers and 9 short papers included in the proceedings were carefully reviewed and selected from 58 submissions The book also contains 2 Doctoral Symposium papers 3 demonstration papers and 5 indexing challenge papers The contributions were organized in the following topical sections Applications Foundations Search and Retrieval Similarity Measures Clustering Indexing Learning Based Methods Doctoral Symposium Demonstration Papers and Indexing Challenge
