types of synchronizers is given followed by its components and how they interact with each other in order to complete the gear changing process namely the synchronization process Then quality factors are indentified and their effect on the performance and thus synchronizer efficiency In this project a model of the manual transmission synchronizer is developed It is divided into eight different phases corresponding to different events in the process Only the first three phases have been implemented in Matlab and simulated with different values of some design parameters in order to analyze the response The results show a good qualitative agreement with the literature
