Communication in Heterometallated Porphyrin Oligomers Jonathan Cremers, 2020-02-13 This book cuts across the divisions of organic inorganic and physical chemistry It describes new methods for creating conjugated porphyrin oligomers with precisely defined sequences of zinc and copper metal cations and how EPR spectroscopy was used to investigate the dipolar and exchange coupling between the paramagnetic copper II centres Porphyrins are a group of heterocyclic macrocycle organic compounds that play an important role in our everyday life and can for example be found in blood where they form a red complex with iron haem Various metallic elements can be inserted into a porphyrin and changing the coordinated metal is an excellent way to influence the chemical and physical properties of these molecules Focusing on 3 metals zinc magnesium and copper the author established new methods for creating conjugated porphyrin oligomers and lastly presents the synthesis and investigation of two novel porphyrin nanoballs Giving the template directed strategy the author developed for constructing these molecules this work could provide access to other related nano cages **Tactical**

Communications for the Digitized Battlefield Michael J. Ryan, Michael R. Frater, 2002 Traditional tactical communications systems consist of a number of separate subsystems with little interworking between them and with external sensors and weapons systems Combat net radio CNR has provided the high mobility communications required by combat troops while trunk communications systems have provided high capacity communications between headquarters at the expense of mobility The focus of this book is on new information age technologies that promise to offer seamless integration of real time data sharing creating a single logical network architecture to facilitate the movement of data throughout the battlespace Because the structure of this network is constrained by the fundamental trade off between range mobility and capacity that applies to all communications systems this network is unlikely to be based on a single network technology This book presents an architecture for this network and shows how its subsystems can be integrated to form a single logical network Surface Acoustic Wave Devices for Mobile and Wireless Communications, Four-Volume Set Colin

Campbell, 1998-06-17 Written for readers with or without surface acoustic wave SAW experience this book covers a wide range of SAW filter and device design techniques as well as applications to mobile and wireless circuitry It provides numerous references and worked examples on SAW devices to highlight various design aspects and contains illustrations from many leading electronic companies around the world The first half of the book covers the principles of SAW devices The second half focuses on applications to the mobile wireless field including SAW devices for antenna duplexers RF and IF filters for cellular cordless phones front end filters for wireless transceivers fixed and tunable oscillators filters for on board satellite communications as well as coding and convolvers for indoor outdoor spread spectrum communications Surface Acoustic Wave Devices for Mobile and Wireless Communications serves as an excellent sourcebook for engineers and designers with some SAW background or for technical staff with no prior knowledge of SAW devices who need to know how

this technology can help their products It can be used as a textbook for senior and graduate students engaged in the study of signal processing techniques and systems for mobile communications Key Features First SAW text applied to mobile and wireless communications Written by an award winning researcher with over 20 years of SAW device experience Presents the theory and design of major SAW devices for mobile wireless communications as applied to some of the major telecommunication standards Accessible to both engineering and scientific readers with or without prior SAW device knowledge
