Dual-use life science research and biosecurity in the 21st Century: Social, Technical, Policy, and Ethical Challenges Jonathan E. Suk,Kathleen M. Vogel,Amanda Jane Ozin,2015-06-04 In September 2011 scientists announced new experimental findings that would not only threaten the conduct and publication of influenza research but would have significant policy and intelligence implications The findings presented a modified variant of the H5N1 avian influenza virus hereafter referred to as the H5N1 virus that was transmissible via aerosol between ferrets These results suggested a worrisome possibility the existence of a new airborne and highly lethal H5N1 virus that could cause a deadly global pandemic In response a series of international discussions on the nature of dual use life science arose These discussions addressed the complex social technical political security and ethical issues related to dual use research This Research Topic will be devoted to contributions that explore this matrix of issues from a variety of case study and international perspectives

The State of Social Progress of Islamic Societies Habib Tiliouine,Richard J. Estes,2016-04-08 This handbook addresses the historical background of the Islamic world and reviews its basic past intellectual achievements It studies social progress of these regions and sub regions in comparison with other parts of the world It uses large data sets and well established statistically weighted Indexes in order to assess the nature and pace of the multiple facets of social change in member states of the

Organization of Islamic Cooperation OIC The handbook extensively discusses the main challenges confronting the Islamic nations in the social economic political and ideological fields Though it is recognizable that social change in the Islamic World is generally positive it remains highly variable in pace and there is room to speed it up to the benefit of millions of deprived Muslim people Hence the book studies the different propositions and programs of action such as the United Nations Millennium Development Campaign and the OIC s Ten Year Programme of Action to present an integrated and comprehensive agenda of action to help improve the situation in the Islamic World *Ethics and Integrity in Health and Life Sciences Research* Zvonimir Koporc, 2018-12-06 This important volume covers ethics and integrity in health and life sciences research It addresses concerns in gene editing dual use and misuse of biotechnologies big data and nutritional science in health and medicine and covers attempts at ensuring ethical practices in such fields are shared internationally **Space Ethics** Brian Patrick Green, 2021-10-19 Throughout history humans have explored new places making both good and bad moral decisions along the way As humanity proceeds to explore space it is important that we learn from the successes and not repeat the mistakes of the past This book provides the first comprehensive introduction to ethics as it applies to space exploration and use It examines real world case studies that exemplify the ethical challenges we face in exploring beyond Earth space debris militarization in space hazardous asteroids planetary protection the search for extraterrestrial life commercial and private sector activities in space space settlements very long duration missions and planetary scale interventions Major themes include human health environmental concerns safety and risk governance and decision making and opportunities and challenges of multidisciplinary and international contexts Ideal for classroom use and beyond the book provides ways of thinking that will help students academics and policymakers examine the full range of ethical decisions on questions related to space exploration **Nanotechnology and Functional Foods** Cristina Sabliov, Hongda Chen, Rickey Yada, 2015-04-21 The continued advancement in the sciences of functional foods and nutraceuticals has clearly established a strong correlation between consumption of bioactives and improved human health and performance However the efficacy and bioavailability of these bioactive ingredients e g omega 3 oils carotenoid antioxidants vitamins and probiotic bacteria in foods often remains a challenge due to their instability in food products and gastrointestinal tract as well as their limited bioavailability In some cases these bioactive ingredients may impart an undesirable organoleptic characteristic to the final product which hinders acceptance by consumers In addressing these challenges development of effective delivery systems is critical to meet the consumer needs for effective bioactives The scientific knowledge behind developing effective delivery of bioactive components into modern and wide ranging food products will be essential to reap their health promoting benefits and to support the sustained growth of the functional foods market *Nanotechnology and Functional Foods Effective Delivery of Bioactive Ingredients* explores the current data on all aspects of nanoscale packing carrying and delivery mechanisms of bioactives ingredients to functional foods The book presents various delivery systems including nano emulsions solid lipid

nanoparticles and polymeric nano particles their properties and interactions with other food components and fate in the human body Later chapters emphasize the importance of consumers attitude towards nano delivery for the success of the technology and investigate the challenges faced by regulatory agencies to control risks and harmonize approaches worldwide The wide applicability of bioactive delivery systems with the purpose of improving food quality food safety and human health will make this book a worthy reference for a diverse range of readers in industry research and academia **Ecological and**

Disasters are part of the modern condition a source of physical anxiety and existential angst and they are increasing in frequency cost and severity Drawing on both disaster research and social theory this book offers a critical examination of their causes consequences and future avoidance *Dreamers, Visionaries, and Revolutionaries in the Life Sciences* Oren Harman, Michael R. Dietrich, 2018-07-20 What are the conditions that foster true novelty and allow visionaries to set their eyes on unknown horizons What have been the challenges that have spawned new innovations and how have they shaped

modern biology In *Dreamers Visionaries and Revolutionaries in the Life Sciences* editors Oren Harman and Michael R Dietrich explore these questions through the lives of eighteen exemplary biologists who had grand and often radical ideas that went far beyond the run of the mill science of their peers From the Frenchman Jean Baptiste Lamarck who coined the word biology in the early nineteenth century to the American James Lovelock for whom the Earth is a living breathing organism these dreamers innovated in ways that forced their contemporaries to reexamine comfortable truths With this collection readers will follow Jane Goodall into the hidden world of apes in African jungles and Francis Crick as he attacks the problem of consciousness Join Mary Lasker on her campaign to conquer cancer and follow geneticist George Church as he dreams of bringing back woolly mammoths and Neanderthals In these lives and the many others featured in these pages we discover visions that were sometimes fantastical quixotic and even threatening and destabilizing but always a challenge to the status quo

Comets And Their Origin Uwe Meierhenrich, 2015-01-30 Divided into two parts the first four chapters of *Comets and their Origin* refer to comets and their formation in general describing cometary missions comet remote observations astrochemistry artificial comets and the chirality phenomenon The second part covers the cometary ROSETTA mission its launch journey scientific objectives and instrumentations as well as the landing scenario on a cometary nucleus Along the way the author presents general questions concerning the origin of terrestrial water and the molecular beginnings of life on Earth as well as how the instruments used on a space mission like ROSETTA can help answer them The text concludes with a chapter on what scientists expect from the ROSETTA mission and how its data will influence our life on Earth As a result the author elucidates highly topical and fascinating knowledge to scientists and students of various scientific backgrounds allowing them to work with ROSETTA's data

[Transfer Cells](#) David McCurdy, Gregorio Hueros, 2015-05-18 Transfer cells are anatomically specialized cells optimized to support high levels of nutrient transport in plants These cells trans differentiate from existing cell types by developing extensive and localized wall ingrowth labyrinths to amplify plasma membrane surface area which in turn supports high densities of membrane transporters Unsurprisingly therefore transfer cells are found at key anatomical sites for nutrient acquisition distribution and exchange Transfer cells are involved in delivery of nutrients between generations and in the development of reproductive organs and also facilitate the exchange of nutrients that characterize symbiotic associations Transfer cells occur across all taxonomic groups in higher plants and also in algae and fungi Deposition of wall ingrowth like structures are also seen in syncytia and giant cells which function as feeding sites for cyst and root knot nematodes respectively following their infection of roots Consequently the formation of highly localized wall ingrowth structures in diverse cell types appears to be an ancient anatomical adaption to facilitate enhanced rates of apoplasmic transport of nutrients in plants In some systems a role for transfer cells in the formation of an anti pathogen protective barrier at these symplastic discontinuities has been inferred Remarkably the extent of cell wall ingrowth development at a particular site can show high plasticity suggesting that transfer cell differentiation

might be a dynamic process adapted to the transport requirements of each physiological condition Recent studies exploiting different experimental systems to investigate transfer cell biology have identified signaling pathways inducing transfer cell development and genes gene networks that define transfer cell identity and or are involved in building the wall ingrowth labyrinths themselves Further studies have defined the structure and composition of wall ingrowths in different systems leading in many instances to the conclusion that this process may involve previously uncharacterized mechanisms for localized wall deposition in plants Since transfer cells play important roles in plant development and productivity the latter being relevant to crop yield especially so in major agricultural species such as wheat barley soybean and maize understanding the molecular and cellular events leading to wall ingrowth deposition holds exciting promise to develop new strategies to improve plant performance a key imperative in addressing global food security This Research Topic presents a timely and comprehensive treatise on transfer cell biology to help define critical questions for future research and thereby generating a deeper understanding of these fascinating and important cells in plant biology

The Umbilical Cord Blood Controversies in Medical Law Karen Devine,2017-01-12 Since the therapeutic value of umbilical cord blood UCB stem cells was first recognised in the late 1980s there has been a proliferation of both public and private UCB banks worldwide However the ability to utilise such a potentially valuable resource has provoked a number of controversies In a distinctly accessible style this book unpacks the socio legal implications of the UCB collection process and constructs a detailed analysis of the law and ethics that surrounds UCB banking in the UK including ownership of the cells Its enquiry is located within the theoretical framework of altruism versus self interest and explores the notions of risk and choice associated with this distinctive blend of public private healthcare provision The book evaluates the impact of the Human Tissue Act 2004 and the European Union Tissues and Cells Directive 2004/23/EC on the UCB industry and provides a unique insight into the effect that the law may have on the NHS whose maternity staff and premises are used to collect UCB This book would be of interest primarily to a UK readership in addition to expectant families health professionals students academics practitioners and the UCB industry elsewhere in the world

Diseased existents or existent diseases? Walter Lips,2024-10-01 This book aims to cover both the ontological determination and the characterization of what we call with terms such as disease and others related The current edition is a more complete version of the first edition in Spanish that was published four years ago In this edition both semantic and gnoseological as well as ontological issues have been developed in more detail and depth The foregoing is due to the fact that we could establish the meaning of the disease concept based on its explicit ontological reference namely the question about the existence of disease Furthermore to achieve that aim it is appropriate to consider the essential properties of live systems Consequently this edition has reviewed in greater depth what is related to bioplasticity and macromolecular interactive processes of live systems including epigenetic processes
