

### Immediate Recording Start and No Overwriting Footage

By virtue of recording on flash memory card, the XDCAM EX can start recording virtually the instant the camcorder is turned on. Moreover, the XDCAM EX system automatically records on an empty area of the card – there's no danger of overwriting existing content.

This is extremely convenient, as camera operators do not have to worry about accidentally recording over good takes, and they don't have to search through footage for the correct position to start the next recording. In short, it means the camera is always ready for the next shot.

### Instant-access Thumbnail Search with "Expand" Function

Each time a recording is started and stopped on the XDCAM EX camcorder, the video and audio signals are recorded as one clip. During playback, users can cue-up to the next or previous clip simply by pressing the "Next" or "Previous" button, as you would do on a CD or DVD player.

Furthermore, thumbnails are automatically generated for each clip as a visual reference, allowing operators to cue-up to a desired scene simply by guiding the cursor to a thumbnail and pressing the "Play" button.

For further convenience, the "Expand" function allows one selected clip in the Thumbnail display to be divided into 12 even-time intervals, each with their own thumbnail identifier. This is useful if you want to quickly search for a particular scene within a lengthy clip.

### 1/2-inch type Three Exmor™ CMOS Sensors

The PMW-EX3 is equipped with three newly developed 1/2-inch type Exmor™ CMOS Sensors, each with an effective pixel count of 15.20 (H) x 10.80 (V), which delivers excellent picture performance with full HD resolution. This 1/2-inch type image sensor, using Sony's advanced accumulated sensor technologies, allows the camcorder to provide an excellent sensitivity of F16, a remarkable signal-to-noise ratio of 54 dB, and a high horizontal resolution of 1000 TV lines\*.

In addition, this large 1/2-inch type image sensor can capture images with a shallower depth of field than smaller-size image sensors, giving users more creative freedom of expression. What's more, the Exmor CMOS sensor is a unique design that deploys an A/D converter to each column of pixels, resulting in a much lower clock speed than conventional CMOS sensors. This makes it possible to greatly reduce power consumption of the camcorder.

\*for 1920 x 1080/25, 30 mode

### Interchangeable Lens System with Wide-angle Fujinon 14x Zoom Lens Included

The PMW-EX3 is equipped with a superb interchangeable Fujinon 14x zoom lens specifically designed for

the PMW-EX3 to offer optimum picture performance. It offers a wide angle of view of 3.8 mm (equivalent to 21.4 mm on a 35 mm lens). Also supplied is a lens adaptor to allow use of other 1/2-inch lenses. Addition of lens adaptors will allow use of 2 1/2-inch, digital cinema and digital stills lenses for wide creative functionality.

### Unique Focus Operation - Professional Manual Focus and Auto Focus

The supplied lens adopts a newly developed and unique focus ring mechanism, which offers two types of manual focus, plus an auto focus operation. The PMW-EX3 camcorder is equipped with two independent focus wheel mechanisms, which can be controlled by sliding the focus ring itself back and forth.

When the focus ring is in the front position, the lens works in the same way as a typical auto focus lens on a handheld camcorder. In this case, either manual or auto focus mode can be selected by the AF/MF switch on the lens. On the other hand, when the focus ring is set to the back position, the lens has an absolute focus position which professional users are familiar with.

### Three Independent Rings

In addition to the unique focus ring, the PMW-EX3 supplied lens is equipped with independent rings for zoom and iris adjustment. These are located adjacent to the focus ring, in the same layout as is common on other interchangeable lenses. This gives users a high level of operational comfort and control.

### AF Assist

The AF (Auto Focus) Assist function enables operators to manually change focus positions using the focus ring during AF mode. This means that AF reference focus positions can be shifted to manually changed positions.

### MF Assist

The MF (Manual Focus) Assist function helps to precisely focus on the target subject when shooting in MF mode. When the MF Assist is turned on, auto focus is momentarily activated and finely focuses on the subject closest to the focal point of the lens at that time.

### Expanded Focus

At the touch of a button, the center of the screen on the LCD monitor can be magnified to about twice normal size, making it easier to confirm focus settings during manual focusing.

### Selectable Peaking on the Viewfinder

The Peaking function can help operators to adjust the camera's focus more accurately by altering the way pictures are displayed on the LCD monitor. It can enhance the outline of the image, which the camera focuses on most, and change its colour to make it more visible. Enhance levels can be selected via the control dial on the rear of the LCD monitor and the outline colour from "RED", "WHITE", "YELLOW", and "BLUE" from the menu.
