

SECTION 260543 – UNDERGROUND DUCT BANKS AND RACEWAYS

- 1.0 Components of Underground Ductbank and Raceway installations shall meet all applicable Federal Specifications, ANSI Standards, ASTM Standards, NEMA Standards, NFPA70 Code, and UL listing requirements.
- 2.0 Refer to Section 260533 – “Conduit” for conduit requirements. In general, schedule 40 PVC conduit shall be used in underground duct banks and raceways. Where underground conduits sweep up to equipment pads, etc, sweep elbows shall be schedule 40 RGS type to prevent “burn through” from cable pulling. Exceptions require approval of the University Engineering Department.
- 3.0 Refer to Section 260553 – “Electrical Identification” for identification and hazard warning requirements.
- 4.0 Underground installations:
 - A Concrete encased ductbanks under roadways, parking lots, or other areas subject to vehicular traffic and all medium voltage work: Use schedule 40 rigid PVC conduit; steel reinforced concrete-encased ductbank. The minimum burial depth for all medium voltage duct banks is 3 feet below grade, measured to top of ductbank.
 - B Concrete encased ductbanks in all other areas:
 1. Use schedule 40 rigid PVC.
 2. Where elbows are required to transition from horizontal to vertical for stub-ups, use rigid steel conduit sweep elbows.
 3. Reinforcement of concrete is not required.
 - C Direct burial of branch circuit wiring for lighting, pumps, receptacles, etc.: Use Schedule 40 PVC conduit.
 - D Installation of conduits under building slabs and foundations is strictly prohibited. The only exception allowed is service entrance feeders which shall be permitted to be installed under slab, although horizontal entry through the foundation wall is preferred. Service entrance feeder conduits shall terminate in a pull box located on the inside of the foundation wall. Entrance pull boxes shall have a drain line to building sump. Service entrance feeders shall continue via exposed conduit run from the entrance pull box to the service equipment.
 - E All wiring to devices located within the building will be installed in raceway systems located within the structure.
 - F Underground duct banks and conduit shall be located above water lines and below steam piping. Maintain a minimum 6-foot clearance between underground conduit or duct banks and any parallel steam lines. Underground crossings above and below steam lines shall maintain a minimum 24-inch clearance and the space between shall be filled with foam glass insulation.
