Meier,2022-12-15

Consumer Society and Ecological Crisis advances a critique of consumer capitalism and its role in driving environmental degradation and climate crisis placing a spotlight on how marketing and distribution activities help maintain unsustainable levels of consumption Rather than focusing on the most visible sites of promotional communication Meier examines less conspicuous facets of marketing and logistics in distinct chapters on plastic packaging e commerce and sustainability pledges in the fossil fuel sector These three main chapters each explore links between ecological crisis and consumer capitalism drawing on critical theory and Marxist thought The topics of consumer convenience speed and economic growth and the role of fossil fuels as guarantor of these logics of consumer society unite the critical analysis Situated in the field of media and communication studies and adopting an interdisciplinary approach this book will be of interest to academics researchers and students in the areas of media and communication studies cultural studies sociology geography philosophy political science and advertising **A Scientist Audits the Earth** Stuart Leonard Pimm,2004

Humans use 50 percent of the world s freshwater supply and consume 42 percent of its plant growth We are liquidating animals and plants one hundred times faster than the natural rate of extinction Such numbers should make it clear that our impact on the planet has been and continues to be extreme and detrimental Yet even after decades of awareness of our environmental peril there remains passionate disagreement over what the problems are and how they should be remedied Much of the impasse stems from the fact that the problems are difficult to quantify How do we assess the impact of habitat loss on various species when we haven t even counted them all And just what factors go into that 42 percent of biomass we are hungrily consuming It is only through an understanding of the numbers that we will be able to break that impasse and come to agreement on which environmental issues are most critical and how they might best be addressed Working on the front lines of conservation biology Stuart Pimm is one of the pioneers whose work has put the science in environmental science In this book he appoints himself investment banker of the global biological accounts checking the environmental statistics gathered by tireless scientists in work that is always painstaking and often heartbreaking With wit passion and candor he reveals the importance of understanding where these numbers come from and what they mean To do so he takes the reader on a globe circling tour of our beautiful but weary planet from the volcanic mountains and rainforests of Hawai i to the boreal forests of Siberia At times the view looks rather grim Yet Pimm ever the optimist presents a world filled with mysterious beauty the infinite variety of nature and an urgent hope that through an understanding of our planet s environmental past and present we will be inspired to save it from future extinction **The Improvement of Water Supplies for Rural Areas in the Amazon Valley** Waldemar Lins de Vasconcelos Chaves,1946 **Destination Earth** David Dexter,2022-11-18
