The Human Locomotor System Thompson Sarkodie-Gyan, Huiying Yu, 2023-06-27. The textbook describes the complexity of the human dynamic behavior in space and its ability to produce coordinated adaptive dynamically stable movements under steady conditions while negotiating complex terrains and experiencing unexpected perturbations. Applying fundamental theories of biomechanics and physiology, the authors further consider the physical, perceptual, and motor aspects of the locomotor system towards the analysis of how humans can behave adaptively in space by virtue of their intelligent sensory motor functions and to illuminate our understanding of how this complexity in behavior can provide insight into the neural control of locomotion of the musculoskeletal system. The text provides a foundation for describing the normal and abnormal human locomotor systems. *The Human Locomotor System: Physiological and Technological Foundations* is intended as a primary text for upper undergraduate and graduate level courses in neuroscience, gait analysis, kinesiology, physical therapy, sports science, and biomedical and rehabilitation engineering.
