Uncertainty Theory Baoding Liu, 2014-11-03 When no samples are available to estimate a probability distribution we have to invite some domain experts to evaluate the belief degree that each event will happen Perhaps some people think that the belief degree should be modeled by subjective probability or fuzzy set theory However it is usually inappropriate because both of them may lead to counterintuitive results in this case In order to rationally deal with belief degrees uncertainty theory was founded in 2007 and subsequently studied by many researchers Nowadays uncertainty theory has become a branch of axiomatic mathematics for modeling belief degrees This is an introductory textbook on uncertainty theory uncertain programming uncertain statistics uncertain risk analysis uncertain reliability analysis uncertain set uncertain logic uncertain inference uncertain process uncertain calculus and uncertain differential equation This textbook also shows applications of uncertainty theory to scheduling logistics networks data mining control and finance *Uncertainty Theory* Baoding Liu, 2004 This book provides a self contained comprehensive and up to date presentation of uncertainty theory The main purpose is to equip the readers with an axiomatic approach to deal with uncertainty Mathematicians researchers engineers designers and students in the field of applied mathematics operations research statistics industrial engineering information science and management science will find this work a useful reference BOOK JACKET Title Summary field provided by Blackwell North America Inc All Rights Reserved *Modeling and Applications in Operations Research* Jyotiranjan Nayak, Shreekant Varshney, Chandra Shekhar, 2023-11-29 The text envisages novel optimization methods that significantly impact real life problems starting from inventory control to economic decision making It discusses topics such as inventory control queueing models timetable scheduling fuzzy optimization and the Knapsack problem The book's content encompasses the following key aspects Presents a new model based on an unreliable server wherein the convergence analysis is done using nature inspired algorithms Discusses the optimization techniques used in transportation problems timetable problems and optimal dynamic pricing in inventory control Highlights single and multi objective optimization problems using pentagonal fuzzy numbers Illustrates profit maximization inventory model for non instantaneous deteriorating items with imprecise costs Showcases nature inspired algorithms such as particle swarm optimization genetic algorithm bat algorithm and cuckoo search algorithm The text covers multi disciplinary real time problems such as fuzzy optimization of transportation problems inventory control with dynamic pricing timetable problem with ant colony optimization knapsack problem queueing modeling using the nature inspired algorithm and multi objective fuzzy linear programming It showcases a comparative analysis for studying various combinations of system design parameters and default cost elements It will serve as an ideal reference text for graduate students and academic researchers in the fields of industrial engineering manufacturing engineering production engineering mechanical engineering and mathematics Uncertain Optimal Control Yuanguo Zhu, 2018-08-29 This book introduces the theory and applications of uncertain optimal control and establishes two

Neutrosophic Sets and Systems, vol. 53/2023 Florentin Smarandache, Mohamed Abdel-Basset, Said Broumi, 2023-01-15 Neutrosophic Sets and Systems has been created for publications on advanced studies in neutrosophy neutrosophic set neutrosophic logic neutrosophic probability neutrosophic statistics that started in 1995 and their applications in any field such as the neutrosophic structures developed in algebra geometry topology etc Neutrosophy is a new branch of philosophy that studies the origin nature and scope of neutralities as well as their interactions with different ideational spectra This theory considers every notion or idea together

with its opposite or negation and with their spectrum of neutralities in between them i.e. notions or ideas supporting neither nor. The and ideas together are referred to as Neutrosophy is a generalization of Hegel's dialectics the last one is based on and only. According to this theory every idea tends to be neutralized and balanced by and ideas as a state of equilibrium. In a classical way are disjoint two by two. But since in many cases the borders between notions are vague imprecise Sorites it is possible that and of course have common parts two by two or even all three of them as well. Neutrosophic Set and Neutrosophic Logic are generalizations of the fuzzy set and respectively fuzzy logic especially of intuitionistic fuzzy set and respectively intuitionistic fuzzy logic. In neutrosophic logic a proposition has a degree of truth T , a degree of indeterminacy I and a degree of falsity F where T, I, F are standard or non standard subsets of $[0, 1]$. Neutrosophic Probability is a generalization of the classical probability and imprecise probability. Neutrosophic Statistics is a generalization of the classical statistics. What distinguishes the neutrosophics from other fields is the which means neither nor which of course depends on can be indeterminacy neutrality tie game unknown contradiction ignorance imprecision etc.

Fuzzy Systems and Data Mining IV
Antonio J. Tallón-Ballesteros, Kaicheng Li, 2018-11-15 Big Data Analytics is on the rise in the last years of the current decade. Data are overwhelming the computation capacity of high performance servers. Cloud, grid, edge and fog computing are a few examples of the current hype. Computational Intelligence offers two faces to deal with the development of models: on the one hand the crisp approach which considers for every variable an exact value and on the other hand the fuzzy focus which copes with values between two boundaries. This book presents 114 papers from the 4th International Conference on Fuzzy Systems and Data Mining FSDM 2018 held in Bangkok, Thailand from 16 to 19 November 2018. All papers were carefully reviewed by program committee members who took into consideration the breadth and depth of the research topics that fall within the scope of FSDM. The acceptance rate was 32.85%. Offering a state of the art overview of fuzzy systems and data mining the publication will be of interest to all those whose work involves data science.

Cycle Index of Uncertain Random Graph Lin Chen, Jin Peng, Congjun Rao, Isnaini Rosyida, With the increasing of the complexity of a system there is a variety of indeterminacy in the practical applications of graph theory We focus on uncertain

random graph in which some edges exist with degrees in probability measure and others exist with degrees in uncertain measure In this paper the chance theory is applied to construct the cycle index of an uncertain random graph Then a method to calculate the cycle index of an uncertain random graph is presented We also discuss some properties of the cycle index

The Handbook of Rationality Markus Knauff, Wolfgang Spohn, 2021-12-14 The first reference on rationality that integrates accounts from psychology and philosophy covering descriptive and normative theories from both disciplines Both analytic philosophy and cognitive psychology have made dramatic advances in understanding rationality but there has been little interaction between the disciplines This volume offers the first integrated overview of the state of the art in the psychology and philosophy of rationality Written by leading experts from both disciplines The Handbook of Rationality covers the main normative and descriptive theories of rationality how people ought to think how they actually think and why we often deviate from what we can call rational It also offers insights from other fields such as artificial intelligence economics the social sciences and cognitive neuroscience The Handbook proposes a novel classification system for researchers in human rationality and it creates new connections between rationality research in philosophy psychology and other disciplines Following the basic distinction between theoretical and practical rationality the book first considers the theoretical side including normative and descriptive theories of logical probabilistic causal and defeasible reasoning It then turns to the practical side discussing topics such as decision making bounded rationality game theory deontic and legal reasoning and the relation between rationality and morality Finally it covers topics that arise in both theoretical and practical rationality including visual and spatial thinking scientific rationality how children learn to reason rationally and the connection between intelligence and rationality
