**Tailings Dam Management for the Twenty-First Century** Franco Oboni, Cesar Oboni, 2019-07-13 This book presents a comprehensive approach to address the need to improve the design of tailings dams their management and the regulation of tailings management facilities to reduce and eventually eliminate the risk of such facilities failing The scope of the challenge is well documented in the report by the United Nations Environment Program UNEP and GRID Arendal entitled Mine Tailings Storage Safety Is No Accident which was released in October 2017 The report recommends that Regulators industry and communities should adopt a shared zero failure objective to tailings storage facilities and identifies several areas where further improvements are required In this context the application of cutting edge risk assessment methodologies and risk management practices can contribute to a significant reduction and eventual elimination of dam failures through Risk Informed Decision Making As such the book focuses on identifying and describing the risk assessment approaches and risk management practices that need to be implemented in order to develop a way forward to achieve socially acceptable levels of tailings dam risk
