The Starspotter's Guide Sheila Kanani, 2025-09-11 It was a story about space Apollo 13 which first hooked Sheila Kanani and now decades later after achieving a PhD in Saturn's magnetosphere and working as an outreach officer for the Royal Astronomical Society she has made a career of weaving together the science and tales of the stars In *The Starspotter's Guide* her first book for adults Sheila pulls together the rich tapestry of the night sky for the armchair stargazer sharing the stories that cultures across the

world have told about the stars for millennia and how these have shaped our exploration and understanding of the Earth from astrologers in ancient India using the stars to calculate the length of the year to Polynesian explorers using them to navigate far beyond their homes And now as our knowledge expands about the endless expanse above us such as what the stars actually are Sheila takes us on a journey through what you'd see if you could jump on a spacecraft and explore these galaxies yourself In this endlessly informative and persuasively interesting miscellany of the night sky Dr Sheila Kanani takes us on a journey through the cosmos and through the human experience of the stars throughout the ages that will have you rushing outside and looking up searching for the curve of the Milky Way

Multiple Stars across the H-R Diagram Svetlana Hubrig, Monika Petr-Gotzens, Andrei Tokovinin, 2007-10-13 The ESO workshop Multiple Stars across the H-R Diagram was held in Garching on 12-15 July 2005 The topics included observations of multiple stars from ground and space dynamical and stellar evolution in multiple systems effects of the environment on multiplicity formation and early evolution of multiple stars and special components of multiple stars chemically peculiar stars blue stragglers brown dwarfs etc Stars show a marked tendency to be in systems of different multiplicity 7 ranging from simple binaries and triples to globular clusters with $N \geq 10$ Modern observations give a frequency of binary and multiple stars in the Galactic field of up to 70% and between 5% and 20% of these systems are at least triple There is evidence that the degree of multiplicity increases with primary mass Many known multiple systems are too wide to have significant physical interaction between their components However tidal and N -body dynamical interactions are important even in relatively wide systems and probably lead to the shrinkage of inner orbits This sets the stage for spectacular evolutionary processes such as Roche lobe overflow mergers

supernovae formation of special components etc Only recently did we realize that some of these processes require at least three stars The formation of multiple systems remains a difficult and challenging part of astrophysics although it has been addressed at the Workshop only briefly
