Stark In Mathematik So:

All Positive Action Starts with Criticism Sacha la Bastide-van Gemert,2015-01-16 This study provides a historical analysis of Freudenthal's didactic ideas and his didactic career It is partly biographical but also contributes to the historiography of mathematics education and addresses closely related questions such as what is mathematics and where does it start Which role does mathematics play in society and what influence does it have on the prevailing views concerning its accompanying didactics Hans Freudenthal 1905 1990 professor in mathematics scientist literator but above all mathematics educator was inextricably linked to the changes which took place in mathematics education and didactics during the second half of the last century His diversity as a scientist and his inexhaustible efforts to establish the didactics of mathematics as a seriously pursued science made Freudenthal's influence in this area considerable He foresaw an essential practical role for mathematics in everyone's life encouraging students to discover and create mathematics themselves instead of imposing a ready made mathematical system The theory of mathematics education thus developed in the Netherlands would gain world fame in the following decades Today in the light of the discussions about mathematics education in which the call for genuine mathematics instead of the so called kindergarten mathematics can be heard Freudenthal's approach seems to be pass However the outcome of this study which is mainly based on documents from Freudenthal's vast personal archive shows a more refined picture The direct identification of kindergarten mathematics with Freudenthal's view on mathematics education is not justified Realistic mathematics as advocated by Freudenthal includes more than just a practical introductory and should among other things always aim at teaching genuine mathematics in the end *Proceedings of the International Congress of Mathematics 14-21 August 1958* , **Proceedings of the**
