Robillard,Walid Maalej,Robert J. Walker,Thomas Zimmermann,2014-04-30 With the growth of public and private data stores and the emergence of off the shelf data mining technology recommendation systems have emerged that specifically address the unique challenges of navigating and interpreting software engineering data This book

collects structures and formalizes knowledge on recommendation systems in software engineering. It adopts a pragmatic approach with an explicit focus on system design, implementation, and evaluation. The book is divided into three parts: Part I Techniques introduces basics for building recommenders in software engineering, including techniques for collecting and processing software engineering data but also for presenting recommendations to users as part of their workflow; Part II Evaluation summarizes methods and experimental designs for evaluating recommendations in software engineering; Part III Applications describes needs, issues, and solution concepts involved in entire recommendation systems for specific software engineering tasks, focusing on the engineering insights required to make effective recommendations. The book is complemented by the webpage rsse.org, which includes free supplemental materials for readers of this book and anyone interested in recommendation systems in software engineering, including lecture slides, data sets, source code, and an overview of people, groups, papers, and tools with regard to recommendation systems in software engineering. The book is particularly well suited for graduate students and researchers building new recommendation systems for software engineering applications or in other high-tech fields. It may also serve as the basis for graduate courses on recommendation systems, applied data mining, or software engineering. Software engineering practitioners developing recommendation systems or similar applications with predictive functionality will also benefit from the broad spectrum of topics covered.
