The use of FRP as reinforcement for concrete structures has been growing rapidly in recent years. This state-of-the-art report summarizes the current state of knowledge on these materials. In addition to the material properties of the constituents, i.e., resins and fibers, design philosophies for reinforced and prestressed elements are discussed. When the available data warrant flexure, shear, and bond behavior, and serviceability of the members has been examined. Strengthening of existing structures with FRPs and field applications of these materials are also presented.

Keywords: composite materials; concrete; concrete construction; design; external reinforcement; fiber reinforced plastic (FRP); fibers; mechanical properties; polymer resins; prestressed concrete; reinforced concrete; reinforcement; research; structural analysis; structural elements; structural research; testing; test methods.

ACI Committee Reports, Guides, Standard Practices, and Commentaries are intended for guidance in designing, planning, executing, or inspecting construction and in preparing specifications. Reference to these documents shall not be made in the Project Documents. If items found in these documents are desired to be part of the Project Documents, they should be phrased in mandatory language and incorporated in the Project Documents.

State-of-the-art Report about Durability of Post-tensioned Bridge Substructures,1999 *Developments in fiber-reinforced polymer (FRP) composites for civil engineering* N. Uddin,A.M. Abro,J.D. Purdue,U. Vaidya,2013-05-15

Abstract The primary objective of this chapter is first to introduce and demonstrate the application of thermoplastic woven glass reinforced polypropylene in the design of modular fiber reinforced bridge decks and next the development of jackets for confining concrete columns against compression and impact loading The design concept and manufacturing processes of the thermoplastic bridge deck composite structural system are presented by recognizing the structural demands required to

support highway traffic Then the results of the small scale static cylinder tests and the impact tests of concrete columns are presented demonstrating that thermoplastic reinforcement jackets act to restrain the lateral expansion of the concrete that accompanies the onset of crushing maintaining the integrity of the core concrete and enabling much higher compression strains compared to CFRP composite wraps to be sustained by the compression zone before failure occurs **FRP**

Composites for Reinforced and Prestressed Concrete Structures Perumalsamy Balaguru, Antonio Nanni, James Giancaspro, 2008-11-05 High strength fibre composites FRPs have been used with civil structures since the 1980s mostly in the repair strengthening and retrofitting of concrete structures This has attracted considerable research and the industry has expanded exponentially in the last decade Design guidelines have been developed by professional organizations in a number of countries including USA Japan Europe and China but until now designers have had no publication which provides practical guidance or accessible coverage of the fundamentals This book fills this void It deals with the fundamentals of composites and basic design principles and provides step by step guidelines for design Its main theme is the repair and retrofit of un reinforced reinforced and prestressed concrete structures using carbon glass and other high strength fibre composites In the case of beams the focus is on their strengthening for flexure and shear or their stiffening The main interest with columns is the improvement of their ductility and both strengthening and ductility improvement of un reinforced structures are covered Methods for evaluating the strengthened structures are presented Step by step procedures are set out including flow charts for the various structural components and design examples and practice problems are used to illustrate As infrastructure ages worldwide and its demolition and replacement becomes less of an option the need for repair and retrofit of existing facilities will increase Besides its audience of design professionals this book suits graduate and advanced undergraduate students **Structural Health Monitoring 2003** Fu-Kuo Chang, 2003 Important new information on sensors monitoring prognosis networking and planning for safety and maintenance

Advanced fibre-reinforced polymer (FRP) composites for structural applications J. Ramôa Correia, 2013-09-30 This chapter focuses on the properties manufacturing processes and quality control of pultruded advanced composites used in civil engineering applications Pultrusion technology is first briefly explained with the main features of the raw materials used being introduced and the philosophy underlying the development of pultruded advanced composites discussed A detailed description of the pultrusion process then follows covering the equipment and procedure technical specifications and quality control Subsequently the types properties applications and sustainability of pultruded profiles reinforcing bars and strengthening strips are described The final part of the chapter discusses future trends for the pultrusion of the advanced composites used in civil engineering applications Computational Structural Engineering Yong Yuan, Junzhi Cui, Herbert A. Mang, 2009-06-05 Following the great progress made in computing technology both in computer and programming technology computation has become one of the most powerful tools for researchers and practicing engineers It has led to tremendous achievements in computer
