Unisa Results Jan Feb 2015:

Radiation-induced and oxidative DNA damages Antonio Monari, Elise Dumont, Chrysostomos

Chatgililoglu, 2015-10-02 DNA stores and passes the genetic information of almost all living organisms. Its molecular structure and their intramolecular interactions are particularly suitable to maximize stability against oxidative stress and UV light absorption. Yet the protection and repair strategies are still error prone. DNA lesions are produced including the most complex and highly mutagenic ones. An important threat to DNA stability comes from photosensitization, i.e. from the dramatic multiplication of radiation induced defects mediated by the presence of organic or organometallic dyes compared to the direct exposure to UVA radiation. Moreover the photo induced production of singlet oxygen generates an extremely high oxidative stress on DNA that in vivo normally results in extended cellular apoptosis. Elucidating the processes leading to DNA damages from the production of a simple radical entity to deleterious lesions as well as the opportunities of repair by devoted enzymes is a cornerstone towards the development of more efficient protection strategies. Sensitization and selective production of DNA lesions can also be exploited to induce the selective apoptosis of cancer cells upon exposition to radiation or to oxidative stress for instance in the field of photodynamic therapy. The importance and relevance of the field is witnessed by the impressive amount of high level papers dealing with this complex subject and notably tackling the structural elucidation of DNA and DNA drug adducts, the mechanisms of formation of DNA lesions including the precise detection of the final lesion products as well as the influence of the lesions on the DNA stability and dynamics and the consequences on the ease of repair. Due to the complexity of the field lying at the frontiers between chemistry, physics and biology multidisciplinary strategies allying modeling and experience are needed. This topic aims at giving an extended overview of the current research in the domain with fundamental contribution from the leading groups in the field of DNA reactivity, structural characterization, photo chemistry and photo physics as well as repair mechanism. It will therefore be a fundamental guide for scientists wanting to address the field of DNA lesion and repair but also more generally for researchers working in rational drug design or in the development of biomarkers and medical imaging techniques. *Kaapse bibliotekaris*, 2015

Issues for Nov 1957 include section Accessions Aanwinste Sept 1957 **Corrupted** Jonathan D Jansen, 2023-02-01 In South African higher education the images of dysfunction are everywhere. Student protests. Violence. Police presence. Rubber or real bullets. Class disruptions. Burning tyres. Damaged buildings. Injury and sometimes death. Reports of wholesale corruption. Year after year often in the same set of universities the problem of routine instability seems insoluble. The financial, academic and reputational costs of ongoing dysfunction are high especially for those universities caught up in the never ending struggle to overcome apartheid legacies. Any number of explanations have been ventured including a lack of resources, shortage of capacity, rural location, corrupt officials and endemic conflict. *Corrupted* takes a deeper look at dysfunction in an attempt to unravel the root causes in a sample of South African universities. At the heart of the problem lies the vexed issue of resources.

or more pertinently the relationship between resources and power who gets what and why Whatever else it aspires to be commonly a place of teaching learning research and public duty a university in an impoverished community is also a rich concentration of resources around which corrupt staff students and those outside of campus all vie for access Taking a political economic approach Jonathan Jansen describes the daily struggle for institutional resources and offers accessible sensible insights He argues that the problem won't be solved through investments in capacity building alone because the combination of institutional capacity and institutional integrity contributes to serial instability in universities Rather durable solutions would include the depoliticisation of university councils and appointments of academics with integrity and capacity to manage and lead these fragile institutions This groundbreaking and long overdue study will offer a promising way forward for universities to better serve their communities and the country more broadly *The High-risk Surgical Patient* Paolo Aseni, Antonino Massimiliano Grande, Ari Leppäniemi, Osvaldo Chiara, 2023-03-07 It is well known that certain diseases and patient conditions are associated with increased perioperative risk The aim of this book is to define and identify the clinical factors that warrant a broader and more detailed assessment of pre operative surgical risk in difficult and unusual clinical settings One of the sections is dedicated to the main pathway of peri and post surgical critical care based on the patient specific deterioration risk and associated diseases here a panel of selected experts describes the correct patient oriented pathways for complex or unscheduled surgical operations in order to reduce the operative risk In addition the book describes the latest trends in minimally invasive surgical techniques that are associated with peri and post operative risk reduction and provides an overview of recent advances in surgical simulation focusing on perspectives in surgical research to increase patient safety Guidance is also provided on extracorporeal membrane oxygenation ECMO Left Ventricular Assist Devices LVADs and their management in patients requiring emergency surgery The book will help surgical trainees recognize cases with the highest surgical risk and identify the most common complications at an early stage Contested Properties Britta Rutert, 2020-02-03 This book deals with the values of medicinal plants and associated knowledge s in the field of bioprospecting in post apartheid South Africa Bioprospecting the use of genetic or biological resources for commercial purposes is a profit oriented enterprise facing new challenges with the rise of human rights and biodiversity politics This new situation has led to claims for political leverage made by indigenous communities as well as to claims for national and local cultural identity and heritage The picture presented here contributes to the widely discussed yet so far unresolved question of how to appropriately share benefits and how to protect indigenous knowledge in this field *How World Events Are Changing Education*, 2022-02-07 Listen to the podcast Education was established to create employees for 19th and 20th century manufacturing models The 21st century requires a rethink Change is happening fast with jobs not guaranteed as robots are taking over routines We must prepare students for uncertainty higher level employment helping them think and communicate instead of retain and recall facts for passing exams Some curricula is either irrelevant for today or gained at
