Blume,M. Kathleen Heid,2018-01-01 The depth and breadth of a mathematics teacher s understanding of mathematics matter most as the teacher engages in the daily work of teaching One of the major challenges to teachers is to be ready to draw on the relevant mathematical ideas from different areas of the school curriculum and from their postsecondary mathematics experiences that can be helpful in explaining ideas to students making instructional decisions creating examples and engaging in other aspects of their daily work Being mathematically ready and confident requires teachers to engage in ongoing professional learning that helps them to connect mathematics to events like those they live on a daily basis The purpose of this volume is to provide teachers teacher educators and other facilitators of professional learning opportunities with examples of authentic events and tools for discussing those events in professional learning settings The work shared in Facilitator s Guidebook for Use of Mathematics Situations in Professional Learning Guidebook resulted from a collaborative effort of school mathematics supervisors and university mathematics educators The collaborators joined their varied experiences as teachers coaches supervisors teacher educators and researchers to suggest ways to scaffold activities encourage discussion and instigate reflection with teacher participants of differing mathematics backgrounds and with varying teaching assignments Each guide has ideas for engaging and furthering mathematical thought across a range of facilitator and participant mathematics backgrounds and draws on the collaborators uses of the Situations with in service and prospective teachers The events and mathematical ideas connected to each event come from Situations in Mathematical Understanding for Secondary Teaching A Framework and Classroom Based Situations A Situation is a description of a classroom related event and the mathematics related to it For each of six Situations school and university collaborators developed a facilitator s guide that presents ideas and options for engaging teachers with the event and the mathematical ideas The Guidebook also contains suggestions for how teachers and others might develop new Situations based on events from their own classrooms as a form of professional learning Both teacher educators and school based facilitators can use this volume to structure sessions and inspire ideas for professional learning activities that are rooted in the daily work of mathematics teachers and students Mathematics Activities for Teaching and Learning Jane Thompson Barnard,Ed R. Connectionist Approaches to Language Learning David Touretzky, 2012-12-06 arise automatically as a result of the recursive structure of the task and the continuous nature of the SRN s state space Elman also introduces a new graphical technique for studying network behavior based on principal components analysis He shows that sentences with multiple levels of embedding produce state space trajectories with an intriguing self similar structure The development and shape of a recurrent network s state space is the subject of Pollack s paper the most provocative in this collection Pollack looks more closely at a connectionist network as a continuous dynamical system He describes a new type of machine learning phenomenon induction by phase transition He then shows that under certain conditions the state space created by these machines can have a fractal or chaotic structure with a potentially infinite number of states This is graphically illustrated using a higher order recurrent network trained to recognize various regular languages over binary strings Finally Pollack suggests that it might be possible to exploit the fractal dynamics of these systems to achieve a generative capacity beyond that of finite state machines

Wallraff,2012-12-06 Right from the start of this century field observations and the patient ringing of birds have made available a growing mass of data on the breeding and resting areas of migratory species and on the course period and duration of their seasonal flights Considered as a whole this work on migration morphology commands admiration and when viewed in detail it reveals fascinating insights into the extraordinary navigational performances of many bird species which find their way over enormous distances Yet only a few dozen physiologists are actively trying to answer the question of how these performances are achieved Experimental work on migratory birds raises many difficulties some of them insuperable so that many researchers carry out their experiments on the homing pigeon which is constantly motivated by homesickness and ready to display its ability to flyaway home Many of the problems connected with bird navigation are still unsolved but a rapidly growing body of results is being produced along with a variety of new ideas and approaches A clear majority of the students of bird navigation met in September 1981 in Tirrenia a seaside resort on the Tyrrhenian coast where each of them offered new insights into his or her recent investigations Their contributions have been connected in this volume which provides an up to date conspectus of the stage reached by research in this field
