Breaking the Cycle of Dependency in K-12 Education: Using Cognitive Science to Guide Instruction Derek

Regensburger, 2025-03-04 This book seeks to help teachers convert dependent learners into independent learners who can take control of their own learning Part One instructs teachers on the conditions that create dependent learners as well as the principles of human intelligence and learning It discusses some of the myths and controversies concerning these topics It also analyzes the cognitive science research on how students learn and what educational practices best promote new learning The second half of the book addresses how teachers can create and implement classroom practices that promote the principles of learning and convert dependent learners into independent ones The book offers a holistic approach to teaching focusing on classroom management and relationship building writing and oral communication lesson design and assessment and feedback It also examines how direct instruction methods can be used in conjunction with active learning strategies like project based learning to improve student retention of knowledge and increase motivation and engagement **SAT Math in the Classroom** A-List Education, 2016-07-15 Bring SAT Math prep into the classroom to enhance student learning In this new copublication from Routledge and test prep experts A List Education you ll learn how the updated SAT exam is closely aligned with the Common Core making it easy to weave test prep into your curriculum and help students hone the skills they need for college readiness The book is filled with practical examples of how the Common Core State Standards are connected to specific sections question types and strategies applicable to the SATs so you can simultaneously prepare your students for the test while improving their overall math and reasoning skills **Linguistic Influences on Mathematical Cognition**

Ann Dowker, Hans-Christoph Nuerk, 2017-06-16 For many years an abstract amodal semantic magnitude representation largely independent of verbal linguistic representations has been viewed as the core numerical or mathematical representation This assumption has been substantially challenged in recent years Linguistic properties affect not only verbal representations of numbers but also numerical magnitude representation spatial magnitude representations calculation parity representation place value representation and even early number acquisition Thus we postulate that numerical and arithmetic processing are not fully independent of linguistic processing This is not to say that in patients magnitude processing cannot function independently of linguistic processing we just suppose these functions are connected in the functioning brain So far much research about linguistic influences on numerical cognition has simply demonstrated that

language influences number without investigating the level at which a particular language influence operates After an overview we present new findings on language influences on seven language levels Conceptual Conceptual properties of language Syntactic The grammatical structure of languages beyond the word level influences Semantic The semantic meaning or existence of words Lexical The lexical composition of words in particular number words Visuo spatial orthographic Orthographic properties such as the writing reading direction of a language Phonological Phonological phonetic properties of languages Other language related skills Verbal working memory and other cognitive skills related to language representations We hope that this book provides a new and structured overview on the exciting influences of linguistic processing on numerical cognition at almost all levels of language processing

EdPsych Modules Cheryl Cisero Durwin, Marla Reese-Weber, 2019-12-04 EdPsych Modules uses an innovative modular approach and case studies based on real life classroom situations to address the challenge of effectively connecting theory and research to practice Succinct stand alone modules are organized into themed units and offer instructors the flexibility to tailor the book's contents to the needs of their course The units begin with a set of case studies written for early childhood elementary middle and secondary classrooms providing students with direct insight into the dynamics influencing the future students they plan to teach All 25 modules highlight diversity emphasizing how psychological factors adapt and change based on external influences such as sex gender race language disability status and socioeconomic background The Fourth Edition includes over three hundred new references across all 25 modules and expanded coverage of diversity in new diversity related research This title is accompanied by a complete teaching and learning package
