Name _____

Date _____ Period _____

An object starts from rest and speeds up at a constant rate while moving in the positive direction for 6 s.

1. Look at the velocity vs. time graph to the right.

a. What can you say about the motion of the object?

b. On the graph, draw a blue arrow from the time axis to the plotted line for each clock reading (or $t = 0$ through $t = 6.0$ s). ($t = 0$ through $t = 2.0$ s have been done for you.)

Each blue arrow is a vector that represents _____ at each clock reading.

- Why is there no blue arrow at $t = 0$?
- What do you notice about the lengths of these arrows?
- What does this tell you about the motion of the object?

c. The velocity changes as time goes on. At $t = 0$ on the graph, a red arrow pointing straight up (along what you would call "rise") has been drawn from the plotted line at $t = 0$ to the value of the velocity at $t = 1.0$ s. The length of this arrow is represents the change in velocity from $t = 0$ to $t = 1.0$ s.

- This red arrow can also be thought of as a vector representing the _____ at $t = 0$.
- Draw a red arrow of appropriate length for each clock reading from $t = 2.0$ s through $t = 6.0$ s. ($t = 0$ and $t = 1.0$ s have been done for you.)

What do you notice about the lengths of these arrows?

What does this tell you about the motion of the object?

d. Draw a motion map representing the motion of this object. Make one dot every second. Use blue arrows to represent velocity and red arrows to represent acceleration. Your arrows should appear with the same length as the ones you drew on your graph.
