

Energy in a Mass-Spring System 2

1. Two identical springs (spring constant 200 N/m) are suspended vertically with identical blocks on the ends (mass 2.0 kg each). The left spring is compressed 10 cm and released. From this position the system is slowly compressed until the spring constant is 10 N/m . From this position the system is slowly compressed until the spring constant is 5 N/m .

For this problem, compressions are given with respect to the uncompressed (equilibrium) state. Answer the following questions.

- (a) How far does the spring stretch when the 10 N/m spring is slowly compressed to position B?

- (b) The block is then pulled to position C, held, and released. Position B is the lowest and highest for oscillations possible. What is the total spring potential energy, gravitational energy, and kinetic energy when the system passes through position B, C, and A?

- (c) How far does the spring stretch when the block is released from position B?

- (d) Create a potential energy bar graph for the system at position the position indicated by the corresponding letter (a-d). Label the bar graph with position and energy.
