WARNING: Later Sequence: When power is applied, the trailer anti-lowering lamp will turn on for a 2.5 second bulb-check, and then turn off. If a PLC trailer and PLC trailer are powered at the same time, the MC-10 will also trigger a 2.5 second bulb check on the trailer flash using PLC.

CAUTION: The MC-30 will perform a modulator "chuff" test at power-up. With brake pressure applied, a properly installed modulator will cause the right, middle chuffs of air pressure. If two modulators are installed, the MC-30 activates the chuffs at MCOO and then MCOO. The chuff sequence is then repeated.

LED SEQUENCE: At power up, the diagnostic LEDs all turn on, then display the current configuration.

MC-100 to L400 Power Supply Requirements	
At power up	90 A @ 120V
For instant displays: number of instant output channels	
4 channels	100 A @ 120V
8 channels	150 A @ 120V
For instant displays: maximum configuration	
1 instant channel (relay, float, control)	90 A @ 120V
1 instant channel (float, control)	90 A @ 120V
1 instant channel (relay, control)	90 A @ 120V
2 instant channels (float, control)	90 A @ 120V
Nominal operation	
See Table 1	90 A @ 120V (maximum)

FAULT DETECTION When a fault is detected, the trailer ABS warning lamp will remain on. If the tractor and trailer are equipped with PLC, the dash-mounted trailer ABS lamp will also remain on. The warning lamps notify the driver that all or part of the ABS function has been compromised and standard air braking is in effect. The faulted component will be identified on the diagnostic display.

FAULT RESET: The MC-30 will automatically reset (self-test) the active fault code when the fault is corrected. Repeated occurrences of a given fault will cause the fault code to latch. Once the fault code is latched, the fault code will need to be cleared by a separate reset or through live code diagnostics.

MAGNETIC ARMED. The ECU can be reset by momentarily holding a magnet against the RESET area on the controller. All the LEDs will be on while the magnet is held in place. If faults occur on multiple components, the LEDs will display one fault at a time. When the first fault is cleared and the ECU-01 is reset, the next fault will be displayed on the LEDs.

SELF-CONVERSION: This is generally performed after replacement of an MC-30. When activated with a magnet or diagnostic tool, the wheel speed sensor, modulator and ABS control settings can be altered. After latching a magnet on the ECU reset location for 20 seconds, the LEDs will begin to roll and the MC-30 will auto-configure. If it is not desired to TOGGLE the self-converter, disconnect the magnet(s) at this location.

ABS CONTROL, TORQUE: The ABS-on ABS control setting can be toggled between auto control, duty-cycle control or sole control. To activate an ABS control toggle, continue to hold the magnet in place while the LEDs are rolling, for an additional 20 seconds (a total of 40 seconds). The LEDs will begin to flash rapidly. Remove the magnet. Verify the new ABS configuration by monitoring the LED sequence at power-up or by activation of drive code distribution.
