Traveling Wave Solutions for Nonlinear Partial Differential Equations Hinwa Leung, 1994 **Christianity for Doubters, Second Edition** Granville Sewell, 2025-09-09 In Christianity for Doubters mathematician Granville Sewell looks at a series of issues that cause Christians to doubt In the first two chapters he shows even more convincingly in this updated second edition that modern science is not close to explaining how the unintelligent laws of Nature alone could have produced intelligent humans and is in fact uncovering abundant evidence for design in the origin and development of life on Earth and even in the laws of Nature themselves But while there is no shortage of evidence that God exists why is it sometimes so hard to see evidence that he cares about people and why does he remain backstage hidden from view working behind the scenes while people act out their parts in the human drama Although these theological problems are more difficult the author shows that some of the most important insights into both the scientific and theological questions can be made by applying a little common sense without relying on ideas that can only be understood by the experts

Advances in Phase Space Analysis of Partial Differential Equations Antonio Bove, Daniele Del Santo, M.K. Venkatesha Murthy, 2009-09-18 The present volume is a collection of papers mainly concerning Phase Space Analysis also known as Microlocal Analysis and its application to the theory of Partial Differential Equations PDEs The basic idea behind this theory at the crossing of harmonic analysis functional analysis quantum mechanics and algebraic analysis is that many phenomena depend on both position and frequency or wave numbers or momentum and therefore must be understood and described in the phase space Including time and its dual variable the energy leads to the spa time phase space From this perspective major progress has been achieved in the analysis of PDEs over the last forty years based on the development of powerful tools of microlocal analysis A number of the following

papers all written by leading experts in their respective fields are expanded versions of talks given at a meeting held in October 2007 at the Certosa di Pontignano a former 1400 cloister sprawling on the hills surrounding Siena The Siena workshop was in honor of Ferruccio Colombini on the occasion of his 60th birthday and it is our pleasure to dedicate to him this volume to which a number of friends and collaborators promptly manifested their willingness to contribute In this sense the present volume can be seen as a scientific portrait of Ferruccio Many people deserve our gratitude We would like to thank all the contributors as well as the people who took part in the workshop who made a lively mathematical attendance

Elements of Partial Differential Equations Pavel Drábek, Gabriela Holubová, 2008-07-16 This textbook presents a first introduction to PDEs on an elementary level enabling the reader to understand what partial differential equations are where they come from and how they can be solved The intention is that the reader understands the basic principles which are valid for particular types of PDEs and to acquire some classical methods to solve them thus the authors restrict their considerations to fundamental types of equations and basic methods Only basic facts from calculus and linear ordinary differential equations of first and second order are needed as a prerequisite An elementary introduction to the basic principles of partial differential equations With many illustrations The book is addressed to students who intend to specialize in mathematics as well as to students of physics engineering and economics

Nonlinear Functional Analysis Felix E. Browder, American Mathematical Society, 1970

Recent Advances in Harmonic Analysis and Partial Differential Equations Andrea R. Nahmod, 2012 This volume is based on the AMS Special Session on Harmonic Analysis and Partial Differential Equations and the AMS Special Session on Nonlinear Analysis of Partial Differential Equations both held March 12-13 2011 at Georgia Southern University Statesboro Georgia as well as the JAMI Conference on Analysis of PDEs held March 21-25 2011 at Johns Hopkins University Baltimore Maryland These conferences all concentrated on problems of current interest in harmonic analysis and PDE with emphasis on the interaction between them This volume consists of invited expositions as well as research papers that address prospects of the recent significant development in the field of analysis and PDE The central topics mainly focused on using Fourier spectral and geometrical methods to treat wellposedness scattering and stability problems in PDE including dispersive type evolution equations higher order systems and Sobolev spaces theory that arise in aspects of mathematical physics The study of all these problems involves state of the art techniques and approaches that have been used and developed in the last decade The interrelationship between the theory and the tools reflects the richness and deep connections between various subjects in both classical and modern analysis
