

13 IT systems troubleshooting and repair

If you are considering a career in IT systems support or networking, or just want to gain a better technical understanding of IT support procedures and practices, this unit – together with Unit 12: IT technical support – is what you need.

This unit presents both theoretical and practical knowledge needed for diagnosing and troubleshooting computer hardware and software problems, making use of different tools and techniques. You will be faced with faults that are simple (known, easy to remedy) and others that are complex (unusual, requiring multi-step solutions) and you will be diagnosing and correcting both types.

You will develop the skills to troubleshoot, find appropriate remedies and repair a range of hardware and software faults in computer systems, all valuable skills in IT support. You will also learn how organisational policies can affect troubleshooting activities.

Because the IT systems world does not stand still, you too need to keep up to date with technical developments. You will refer to various sources of technical information and assess which are of most value to an IT support technician.

An important part of this unit is understanding health and safety issues and good practices when working on IT systems for fault rectification. On completion of this unit you will be able to handle tools correctly, follow health and safety procedures and maintain data security and integrity when rectifying faults – and communicate efficiently and effectively with end users.

Learning outcomes

After completing this unit you should:

1. understand how organisational policies can affect IT troubleshooting and repair
2. be able to use appropriate tools to troubleshoot IT problems
3. be able to select and apply fault remedies to IT systems.
