Sure, Bernhard Thalheim, 2004-10-19 The study reported in this paper is an ongoing effort We reported a preliminary analysis of the data in the paper The current experiments varied the subjects to conduct online group learning activities by the communication media such as email and threaded discussion Although we could have easily learned the impact of mobile devices in learning if we divided the subjects to use different hardware such as personal computers personal digital assistant or mobile phones we believe our findings will still be able to provide useful insights on the difficulties that the mobile learners will face in solving problems as a group Our analysis result will also provide baseline information on whether the traits of the successful or failed online groups are applicable to the mobile learners For example we expect the SMS will be a better medium to overcome the major problem of instant communication or the rapid propagation of the information as the mobile phones have built in mechanism to remind the users of the incoming new messages and also the mobile phone users are expected to be interrupted for the incoming messages However we need further investigation of other problems which hinder the optimum online group work For example accuracy of the transferred information was identified as one of the problems of using emails as the communication medium Personal Digital Assistant PDA or SMS are more apt to deliver shorter messages than the typical emails

The Philosophy of Mathematics Education Paul Ernest, 2002-11-01 Although many agree that all teaching rests on a theory of knowledge there has been no in depth exploration of the implications of the philosophy of mathematics for education This is Paul Ernest's aim Building on the work of Lakatos and Wittgenstein it challenges the prevalent notion that mathematical knowledge is certain absolute and neutral and offers instead an account of mathematics as a social construction This has profound educational implications for social issues including gender race and multiculturalism for pedagogy including investigations and problem solving and challenges hierarchical views of mathematics learning and ability Beyond this the book offers a well grounded model of five educational ideologies each with its own epistemology values aims and social group of adherents An analysis of the impact of these groups on the National Curriculum results in a powerful critique revealing the questionable assumptions values and interests upon which it rests The book finishes on an optimistic note arguing that pedagogy left unspecified by the National Curriculum is the way to achieve the radical aims of educating confident problem posers and solvers who are able to critically evaluate the social uses of mathematics

Mathematical Knowledge in Teaching Tim Rowland, Kenneth Ruthven, 2011-01-06 The quality of primary and secondary school mathematics teaching is generally agreed to depend crucially on the subject related knowledge of the teacher However there is increasing recognition that effective teaching calls for distinctive forms of subject related knowledge and thinking Thus established ways of conceptualizing developing and assessing mathematical knowledge for teaching may be less than adequate These are important issues for policy and practice because of longstanding difficulties in recruiting teachers who are confident and conventionally well qualified in mathematics and because of rising concern that teaching of the subject has not adapted sufficiently The issues to be examined in Mathematical Knowledge in Teaching are of

considerable significance in addressing global aspirations to raise standards of teaching and learning in mathematics by developing more effective approaches to characterizing assessing and developing mathematical knowledge for teaching
